Subject: Re: KPK remediation call

Good afternoon Ray,

I just heard back from one of my colleagues and that Bald Eagle nest (with the CPW label of BOCR) has shown that the juveniles fledged (i.e., are able to fly from the nest) sometime between 6/2/2022 and 6/15/2022.

Therefore, please respond with the Stromquest site clean-up ASAP.

Regards,

I have enclosed some rough maps/images of the site.

We wish to clean this up and not disturb any wildlife.

Thank you

Ray Gorka

Rick,

Thanks for your email.

A point of clarification - the nest is not destroyed - it's still present. However, the nest has failed this year (e.g., no chicks/eggs are present) and the nest remains available for the next breeding season (starts December 1).

But for this purpose, yes, please proceed with the spill clean-up ASAP, and no biological monitor is needed.

Subject: KPK remediation call

Brandon –

Thanks so much for your time this afternoon.

As we discussed, KPK is planning on some remediation efforts at the Paul Heinz 1 and 2 sites located South of Dacono at Lat: 40.034950, and Long: -104.917527.
The site is located approximately 0.11 miles Northeast of a quarter-mile radius of an active Bald Eagle nesting site - less than a half-mile away.
Our conversations today and your file search indicate that the Bald Eagle nest site in question has been destroyed.
At the end of our conversation, you had mentioned that KPK is free to do all work on site without any further coordination or consultation with CPW or USFWS.
This email serves as confirmation to that end and we will file this in the administrative files to serve as our due diligence on site.
Please "respond to all" with your acknowledgement of our assessment of the situation and of our conversation
Thanks again for your time, and I look forward to working with you in the future.
(and KPK thanks you!!!!)
Best - R
