We are on the Thompson C28-23 and will be setting our Courtesy Plug (CIBP w/ 100' of cement) tomorrow. The well has bubbles on the bradenhead and since the Courtesy Plug will do nothing to eliminate those bubbles we would like to cut and pull production casing at 1705' and do a 139' open hole plug. This will keep us 50' from the base of the UPA at 1516'.

Regards,

Jessica Hansen
