Operations have been terribly slow from the start, we have spent the last 17 days drilling up dehydrated mud, a hard plastic material and cement. No gas or hydrocarbons seen throughout the job. Our current depth is 2522'. PDC would like to skip the cement plug from 7379' – 6879', and move forward with pumping cement from 2500' – 2000' trip out wait 4 hours and tag the plug. Pick up and pump a balanced plug from 1311' – 884' trip out wait 4 hours and tag the plug, and complete plugging operations by pumping the surface plug from 670' – surface. Please let me know if you have any questions or concerns, thank you!!
