Re: Paragon Workorder: 08-10-031
Client Project Name: Cistern Excavation
Client Project Number: None Submitted

Dear Ms. O'Connor:

One soil and four water samples were received from URS on October 3, 2008. The samples were scheduled for the following analyses:

Metals	pages 1-212	GC/MS Volatiles	pages 1-215
Glycols	pages 1-112	GC/MS Semivolatiles	pages 1-196
Inorganics	pages 1-123	Total Extractable Hydrocarbons (Diesel)	pages 1-82
Oil and Grease	pages 1-17		

The results for these analyses are contained in the enclosed reports.

Thank you for your confidence in Paragon Analytics. Should you have any questions, please call.

Sincerely,

Debbie Fazio

Paragon Analytics
Debbie Fazio
Project Manager

Total Extractable Hydrocarbons (Diesel) Case Narrative

URS

Cistern Excavation

Order Number - 0810031

1. This report consists of 2 water samples. The samples were received cool and intact by Paragon on 10/03/2008.

2. The water samples were extracted by adding hexane to the water sample and shaking the resulting two phase solution according to Paragon Analytics Standard Operating Procedure 603 Revision 10, which was developed at Paragon Analytics. The hydrocarbons partition into the hexane layer, which is then removed for analysis.

3. The extracts were then analyzed using GC with a DB-5.625 capillary column and a flame ionization detector (FID) according to Paragon Analytics Standard Operating Procedure 406 Revision 12 generally based on SW-846 Method 8000B and Method 8015B. The procedures are based on this general method because SW-846 does not have a specific method for total extractable petroleum hydrocarbons (TEPH) or diesel range organics. The only true modification from this method is that TEPH is a multicomponent mixture and is quantitated by summing the entire range, rather than individual peaks. All positive results were quantitated using the responses from the initial calibration curve using the external standard technique. Also, a confirmation column is not used, because the analyte is a multicomponent mixture and the specific carbon range of the peaks detected is specified on the individual sample reporting forms.

4. All initial and continuing calibration criteria were met.

5. The method blank associated with this project was below the reporting limit, but above the MDL for motor oil range organics. No motor oil or other fuel pattern was present in the method blank. Typically, small fluctuations in the detector baseline are responsible for this type of low level analytical result with no observable fuel pattern.

6. All laboratory control spike and laboratory control spike duplicate recoveries and RPDs were within the acceptance criteria.

7. All matrix spike and matrix spike duplicate recoveries and RPDs were within the acceptance criteria.

8. All samples were extracted and analyzed within the established holding time.

9. All surrogate recoveries were within the acceptance criteria.

10. Manual integrations are performed when needed to provide consistent and defensible data following the guidelines in Paragon Analytics Standard Operating Procedure 939 Revision 3. Whenever manual integrations are performed, before and after chromatograms of the peak that was manually integrated are included in the report along with the reason why the re-integration was necessary.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Data Qualifier Flags
Fuels

G: **This flag indicates that a pattern resembling gasoline was detected in this sample.**

D: **This flag indicates that a pattern resembling diesel was detected in this sample.**

M: **This flag indicates that a pattern resembling motor oil was detected in this sample.**

C: **This flag indicates that a pattern resembling crude oil was detected in this sample.**

4: **This flag indicates that a pattern resembling JP-4 was detected in this sample.**

5: **This flag indicates that a pattern resembling JP-5 was detected in this sample.**

H: **This flag indicates that the fuel pattern was in the heavier end of the retention time window for the analyte of interest.**

L: **This flag indicates that the fuel pattern was in the lighter end of the retention time window for the analyte of interest.**

Z: **This flag indicates that a significant fraction of the reported result did not resemble the patterns of any of the following petroleum hydrocarbon products:**
gasoline
JP-8
diesel
mineral spirits
motor oil
Stoddard solvent
bunker C

Multiple flags may be used to indicate the presence of more than one product or component.

Paragon Analytics, Inc.
Data Qualifier Flags
Chromatography and Mass Spectrometry

U or ND:	**This flag indicates that the compound was analyzed for but not detected.**
J:	**This flag indicates an estimated value. This flag is used as follows : (1) when estimating a concentration for tentatively identified compounds (TICs) where a 1:1 response is assumed; (2) when the mass spectral and retention time data indicate the presence of a compound that meets the volatile and semivolatile GC/MS identification criteria, and the result is less than the reporting limit (RL) but greater than the method detection limit (MDL); (3) when the data indicate the presence of a compound that meets the identification criteria, and the result is less than the RL but greater than the MDL; and (4) the reported value is estimated.**
B:	**This flag is used when the analyte is detected in the associated method blank as well as in the sample. It indicates probable blank contamination and warns the data user. This flag shall be used for a tentatively identified compound (TIC) as well as for a positively identified target compound.**
E:	**This flag identifies compounds whose concentration exceeds the upper level of the calibration range.**
A:	**This flag indicates that a tentatively identified compound is a suspected aldol-condensation product.**
X:	**This flag indicates that the analyte was diluted below an accurate quantitation level.**
***:**	**This flag indicates that a spike recovery is outside the control criteria.**
+:	**This flag indicates that the relative percent difference (RPD) exceeds the control criteria.**

Semi-volatile Organic Compounds (SVOCs)	SW 8270C	7 days to extraction, 40 days after extraction 8	≤6°C	2 - 1L Amber Glass bottles 1 only	1
Glycols (Ethylene + Propylene)	SW 8015B	7 days to preserve, 14 days to analyze 9 1	≤6°C	3 - 40 mL Glass VOA vials 2	
Oil & Grease [3]	EPA 1664	7 days to extraction, 40 days after extraction 10	pH ≤2 with H_2SO_4, ≤6°C unpreserved	1 - 1L Amber Glass Bottles ~~unpreserved~~	

[1] Anions include: chloride, sulfate, fluoride, bromide, nitrate, and nitrite.
[2] Combined nitrate and nitrite aliquot will be analyzed only if sample for anion analysis by Method 300.0 is not analyzed within 48 hours.

08100031

Table 1
Solid Media Analytical Parameters, Holding Times, and Preservation Requirements

Analytical Parameter	Analytical Method	Sample Holding Time (from collection)	Preservation	Number of Containers and Minimum Volume
Metals (including Hg)	SW 6010/SW 6020 and SW 7470A	6 months (28 days mercury)	≤6°C	1 - 8 oz. Amber Glass Jar
Anions [1]	EPA 300.0	28 days		
paste Alkalinity	EPA 310.1			
paste pH	EPA 105.1			
paste Specific Conductance	EPA 120.1			
Nitrate + Nitrite	EPA 353.2			
Percent Solids	PAI SOP			
Volatile Organic Compounds (VOCs)	SW 8260B	14 days	≤6°C	Terracore kit consisting of: 1 - 2 oz. Amber Glass Jar ~~2 - 40 mL Glass Vials w/ water, 1 - 40 mL Glass Vial w/ methanol~~
Total Petroleum Hydrocarbons (Diesel Range Organics [DRO] and Motor Oil Range Organics [MRO])	SW 8015BM	14 days to extraction 40 days after extraction	≤6°C	1 - 8 oz. Amber Glass Jar
Semi-volatile Organic Compounds (SVOCs)	SW 8270C			
Oil & Grease	SW 9071			
Glycols (Ethylene + Propylene)	SW 8015B	7 days to preserve, 14 days to analyze		

TCLP = Toxicity Characteristic Leaching Procedure
ZHE = Zero-headspace extraction
[1] Anions include: chloride, sulfate, fluoride, bromide, nitrate, and nitrite

CONDITION OF SAMPLE UPON RECEIPT FORM

Paragon Analytics

Client: URS

Workorder No: 0810031

Project Manager: DJF

Initials: DJ

Date: 10/3/08

1.	Does this project require any **special handling** in addition to standard Paragon procedures?		YES	NO
2.	Are custody **seals** on **shipping containers** intact?	NONE	YES	NO
3.	Are Custody seals on **sample containers** intact?	NONE	YES	NO
4.	Is there a **COC (Chain-of-Custody) present** or other representative documents?		YES	NO
5.	Are the **COC and bottle labels complete and legible**?		YES	NO
6.	Is the **COC in agreement** with samples received? (IDs, dates, times, no. of samples, no. of containers, matrix, requested analyses, etc.)		YES *	NO
7.	Were **airbills / shipping documents** present and/or removable?	DROP OFF	YES	NO
8.	Are all aqueous **samples requiring preservation preserved correctly?** (excluding volatiles)	N/A	YES	NO
9.	Are all aqueous **non-preserved samples pH 4-9**?	N/A	YES	NO
10.	Is there **sufficient sample** for the requested analyses?		YES	NO
11.	Were all samples placed in the **proper containers** for the requested analyses?		YES	NO
12.	Are all samples within **holding times** for the requested analyses?		YES	NO
13.	Were all sample containers received **intact**? (not broken or leaking, etc.)		YES	NO
14.	Are all samples requiring **no** headspace (**VOC, GRO, RSK/MEE, Rx CN/S, radon**) headspace free? **Size of bubble:** x < green pea x > green pea	N/A	YES	NO •
15.	Do perchlorate LCMS-MS samples **have** headspace? (at least 1/3 of container required)	N/A	YES	NO
16.	Were samples checked for and free from the presence of **residual chlorine?** (Applicable when PM has indicated samples are from a chlorinated water source; note if field preservation with sodium thiosulfate was not observed.)	N/A	YES	NO
17.	Were the samples **shipped on ice**?		YES	NO
18.	Were cooler temperatures measured at 0.1-6.0°C? **IR gun used*:** #2 #4	RAD ONLY	YES	NO

Cooler #:	~~N~~ DJ 10/3/08	1114						
#2 Temperature (°C):	7°	4°						
No. of custody seals on cooler:	1	1						
DOT Survey/ Acceptance Information — External µR/hr reading:	13	13						
Background µR/hr reading:	11							

Were external µR/hr readings ≤ two times background and within DOT acceptance criteria? **YES / NO / NA** (If no, see Form 008.)

Additional Information: PROVIDE DETAILS BELOW FOR A NO RESPONSE TO ANY QUESTION ABOVE, EXCEPT #1 AND #16.

Samples physically received 10/3/08. Unpacked 10/4/08

* Samples 4 and 5 (Trip Blank and Trip Blank 100308) No sample time listed

• Sample 1 (Cistern 100308) 1 of 3 40ml VOC vials contain headspace < pea

2 (CD100308) ↓ ↓ ↓ ↓ ↓ ↓ > pea.

TOC bottles Not rec'd at Paragon

If applicable, was the client contacted? **YES / NO / NA** Contact: _____ Date/Time: _____

Project Manager Signature / Date: _____

*IR Gun #2: Oakton, SN 29922500201-0066 *IR Gun #4: Oakton, SN 2372220101-0002

An "-S" was added as the suffix for soil sample Cistern 100308 per URS.

GC/MS Semivolatiles Case Narrative

URS

Cistern Excavation

Order Number - 0810031

1. This report consists of 2 water samples. These samples were received intact on 10/03/08 at a temperature between 4° C and 7° C.

2. These samples were prepared and analyzed according to SW-846, 3rd Edition protocol utilizing Paragon Analytics Standard Operating Procedures. Specifically, the water samples were extracted using continuous liquid-liquid extractors, according to SW-846 Method 3520C utilizing Paragon Analytics Standard Operating Procedure 617 Revision 13.

3. The extracts were analyzed using GC/MS with a DB-5.625 capillary column according to Paragon Analytics Standard Operating Procedure 506 Revision 15 based on SW-846 Method 8270D. All positive results were quantitated against the initial calibration standards using the internal standard technique. The identification of positive results was achieved by a comparison of the retention time and mass spectrum of the sample versus the daily calibration standard.

4. All initial calibration criteria for SPCC's and CCC's were met. If average response factors were used in the initial calibration, %RSD was ≤15%. If linear or higher order regression calibrations were used in the initial calibration, the coefficient of determination (r^2) ≥0.99.

5. All initial calibration standards are verified by comparing a second source standard initial calibration verification (ICV) against the calibration curve. All target compounds in the second source verification had a %D of less than 25%.

6. All SPCC and CCC criteria were met in each of the daily (continuing) calibration verifications.

7. All method blank criteria were met.

8. All laboratory control spike and laboratory control spike duplicate criteria were met with the following exceptions:

Spiked Compound	QC Sample	Direction
Pyridine	LCS/LCSD	RPD High
Aniline	LCS/LCSD	RPD High
3'3-Dichlorobenzidine	LCS/LCSD	RPD High

Since the recoveries for these compounds in the laboratory control spike and laboratory control spike duplicate were within control limits, with only the RPD exceeding acceptance criteria, quantitations of target compounds were not compromised. No further action was taken.

9. Since a sample from this Order Number was not the selected quality control (QC) sample, matrix specific QC results are not included in this report.

10. The samples were extracted and analyzed within the established holding times.

11. All surrogate recoveries were within acceptance criteria.

12. All internal standard recoveries were within acceptance criteria.

13. Manual integrations are performed when needed to provide consistent and defensible data following the guidelines in Paragon Analytics Standard Operating Procedure 939 Revision 3. The chromatographic data system marks the manual integrations with an m on the quantitation report. Whenever manual integrations are performed, before and after chromatograms of the peak that was manually integrated are included in the report along with the reason why the re-integration was necessary.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Data Qualifier Flags
Chromatography and Mass Spectrometry

U or ND:	**This flag indicates that the compound was analyzed for but not detected.**
J:	**This flag indicates an estimated value. This flag is used as follows: (1) when estimating a concentration for tentatively identified compounds (TICs) where a 1:1 response is assumed; (2) when the mass spectral and retention time data indicate the presence of a compound that meets the volatile and semivolatile GC/MS identification criteria, and the result is less than the reporting limit (RL) but greater than the method detection limit (MDL); (3) when the retention time data indicate the presence of a compound that meets the GC identification criteria, and the result is less than the RL but greater than the MDL; and (4) the reported value is estimated.**
B:	**This flag is used when the analyte is detected in the associated method blank as well as in the sample. It indicates probable blank contamination and warns the data user. This flag shall be used for a tentatively identified compound (TIC) as well as for a positively identified target compound.**
E:	**This flag identifies compounds whose concentration exceeds the upper level of the calibration range.**
A:	**This flag indicates that a tentatively identified compound is a suspected aldol-condensation product.**
X:	**This flag indicates that the analyte was diluted below an accurate quantitation level.**
***:**	**This flag indicates that a spike recovery is equal to or outside the control criteria used.**
+:	**This flag indicates that the relative percent difference (RPD) equals or exceeds the control criteria.**

Shaded values exceed established area count limits.

LIMS Version: 6.199A

Upper Limit = + 100 percent of internal standard area.
Lower Limit = - 50 percent of internal standard area.

Spiked Amount 75.000	Range 21 - 100		Recovery = 79.21%			
6) 2-Chlorophenol-d4	5.44	132	444216	63.50	ng/uL	0.00
Spiked Amount 75.000	Range 33 - 110		Recovery = 84.67%			
8) Phenol-d5	5.30	99	605928	62.88	ng/uL	0.00
Spiked Amount 75.000	Range 15 - 104		Recovery = 83.84%			
15) 1,2-Dichlorobenzene-d4	5.79	152	207279	43.24	ng/uL	0.00
Spiked Amount 50.000	Range 16 - 110		Recovery = 86.48%			
26) Nitrobenzene-d5	6.17	82	377717	46.86	ng/uL	0.00
Spiked Amount 50.000	Range 34 - 111		Recovery = 93.72%			
46) 2-Fluorobiphenyl	7.78	172	607463	44.74	ng/uL	0.00
Spiked Amount 50.000	Range 21 - 106		Recovery = 89.48%			
68) 2,4,6-Tribromophenol	9.08	330	111803	61.88	ng/uL	0.00
Spiked Amount 75.000	Range 23 - 100		Recovery = 82.51%			
83) p-Terphenyl-d14	11.02	244	637274	45.76	ng/uL	0.00
Spiked Amount 50.000	Range 33 - 111		Recovery = 91.52%

GC/MS Volatiles Case Narrative

URS

Cistern Excavation

Order Number - 0810031

1. This report consists of 4 water samples and 1 soil sample. The samples were received intact by Paragon on 10/03/08 at a temperature between 4° C and 7° C. All aqueous samples were free of headspace prior to analysis.

2. These samples were prepared according to SW-846, 3rd Edition procedures. Specifically, the water samples were prepared by purging 10 mL using purge and trap procedures based on Method 5030C.

   The soil sample was prepared by purging a heated 5 grams of sample mixed with 10 mL of reagent water. The calibration curve was also prepared using the heated purge. This procedure, including the heating and agitating, is based on modifications of Method 5035A.

3. The samples were analyzed using GC/MS with an RTX-624, RTX-VMS, or equivalent capillary column according to Paragon Standard Operating Procedure 525 Revision 12 based on SW-846 Method 8260B. All positive results were quantitated against the initial calibration standards using the internal standard technique. The identification of positive results was achieved by a comparison of the retention time and mass spectrum of the sample versus the daily calibration standard.

4. All initial calibration criteria for SPCC's and CCC's were met. If average response factors were used in the initial calibration, %RSD was ≤15%. If linear or higher order regression calibrations were used in the initial calibration, the coefficient of determination (r^2) ≥0.99.

5. All initial calibrations are verified by comparing a second source standard calibration verification (ICV) against the calibration curve. All target compounds in the second source verification had a %D of less than 25%.

6. All criteria for SPCC's and CCC's were met in daily (continuing) calibration verifications (CCV).

7. Methylene chloride, acetone and 2-butanone are common laboratory contaminants. In order to minimize the levels of these compounds detected in the gc/ms analysis, Paragon has designated its volatile laboratory as a restricted access area. In addition, the laboratory has been equipped with a dedicated, air intake and exhaust system that operates under positive pressure in order to minimize cross contamination of these compounds. Due to fluctuations in ambient laboratory conditions, reported sample values for common laboratory contaminants may be due to lab contamination even if the compound in question is not detected in the associated method blank.

   All method blank criteria were met.

8. All laboratory control spike and laboratory control spike duplicate recoveries and RPDs were within the acceptance criteria with the following exceptions:

Spiked Compound	QC Sample	Direction
Tetrachloroethane	VL081009-3LCS/LCSD	RPD High
1-Chlorohexane	VL081009-3LCS/LCSD	RPD High
1-Chlorohexane	VL081006-2LCSD	Low
M+p-xylene	VL081006-2LCS	Low
Styrene	VL081006-2LCS, VL081006-2LCSD	Low
Isopropylbenzene	VL081006-2LCS	Low
1-Chlorohexane	VL081006-2LCSD	Low

   Because of the large number of target analytes reported by this method, the lab allows for sporadic marginal exceedances. No further action was taken.

   Since the recoveries for tetrachloroethane and 1-chlorohexane in the laboratory control spike and laboratory control spike duplicate were within control limits, with only the RPD exceeding acceptance criteria, quantitations of target compounds were not compromised. No further action was taken.

9. Sample 0810031-3 was designated as the quality control sample for this analysis. Similarity of matrix and therefore relevance of the QC results should not be automatically inferred for any sample other than the native sample selected for QC.

   Many matrix spike and matrix spike duplicate recoveries and RPDs were outside the acceptance criteria.

10. The samples were analyzed within the established holding time.

11. All surrogate recoveries were within acceptance criteria.

12. All internal standard recoveries were within acceptance criteria.

13. Manual integrations are performed when needed to provide consistent and defensible data following the guidelines in Paragon Analytics Standard Operating Procedure 939 Revision 3. The chromatographic data system marks the manual integrations with an m on the quantitation report. Whenever manual integrations are performed, before and after chromatograms of the peak that was manually integrated are included in the report along with the reason why the re-integration was necessary.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Data Qualifier Flags
Chromatography and Mass Spectrometry

U or ND:	**This flag indicates that the compound was analyzed for but not detected.**
J:	**This flag indicates an estimated value. This flag is used as follows : (1) when estimating a concentration for tentatively identified compounds (TICs) where a 1:1 response is assumed; (2) when the mass spectral and retention time data indicate the presence of a compound that meets the volatile and semivolatile GC/MS identification criteria, and the result is less than the reporting limit (RL) but greater than the method detection limit (MDL); (3) when the retention time data indicate the presence of a compound that meets the GC identification criteria, and the result is less than the RL but greater than the MDL; and (4) the reported value is estimated.**
B:	**This flag is used when the analyte is detected in the associated method blank as well as in the sample. It indicates probable blank contamination and warns the data user. This flag shall be used for a tentatively identified compound (TIC) as well as for a positively identified target compound.**
E:	**This flag identifies compounds whose concentration exceeds the upper level of the calibration range.**
A:	**This flag indicates that a tentatively identified compound is a suspected aldol-condensation product.**
X:	**This flag indicates that the analyte was diluted below an accurate quantitation level.**
***:**	**This flag indicates that a spike recovery is equal to or outside the control criteria used.**
+:	**This flag indicates that the relative percent difference (RPD) equals or exceeds the control criteria.**

0807079-* was created by combining the samples 0807079-25, -26, -27, and –28. Combining of these PE samples will not create any problems as each of these samples contains different compounds without any overlapping. The 1X dilution was prepared by adding 20uL of each of the samples to a final volume of 100mls, and the 2X dilution was prepared by adding 10uL of each of the samples to a final volume of 100mls, and the 4X dilution was prepared by adding 10uL of each sample to a final volume of 200mls.

0807079-*	20uL of each to 100mls final volume
0807079-* 2X	10uL of each to 100mls final volume
0807079-* 4X	10uL of each to 200mls final volume

Case Narrative

URS

Cistern Excavation

Order Number - 0810031

1. This report consists of 2 water samples. The samples were received cool and intact by Paragon on 10/03/2008.

2. The water samples were prepared for analysis by mixing with an organic solvent prior to injection. The preparation of waters follows Paragon Analytics Standard Operating Procedure 444 Revision 1.

3. The extracts were then analyzed using GC with a Stabilwax capillary column and a flame ionization detector (FID) according to Paragon Analytics Standard Operating Procedures 444 Revision 1 generally based on SW-846 Method 8000B and Method 8015B. All positive results were quantitated using the responses from the initial calibration curve using the external standard technique.

4. All initial and continuing calibration criteria were met.

5. The method blank associated with this project was below the method detection limit for ethylene glycol.

6. All laboratory control spike and laboratory control spike duplicate recoveries and RPDs were within the acceptance criteria.

7. All matrix spike and matrix spike duplicate recoveries and RPDs were within acceptance criteria.

8. All samples were extracted and analyzed within the established holding times.

9. Manual integrations are performed when needed to provide consistent and defensible data following the guidelines in Paragon Analytics Standard Operating Procedure 939 Revision 3. Whenever manual integrations are performed, before and after chromatograms of the peak that was manually integrated are included in the report along with the reason why the re-integration was necessary.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Data Qualifier Flags
Chromatography and Mass Spectrometry

U or ND:	**This flag indicates that the compound was analyzed for but not detected.**
J:	**This flag indicates an estimated value. This flag is used as follows : (1) when estimating a concentration for tentatively identified compounds (TICs) where a 1:1 response is assumed; (2) when the mass spectral and retention time data indicate the presence of a compound that meets the volatile and semivolatile GC/MS identification criteria, and the result is less than the reporting limit (RL) but greater than the method detection limit (MDL); (3) when the data indicate the presence of a compound that meets the identification criteria, and the result is less than the RL but greater than the MDL; and (4) the reported value is estimated.**
B:	**This flag is used when the analyte is detected in the associated method blank as well as in the sample. It indicates probable blank contamination and warns the data user. This flag shall be used for a tentatively identified compound (TIC) as well as for a positively identified target compound.**
E:	**This flag identifies compounds whose concentration exceeds the upper level of the calibration range.**
A:	**This flag indicates that a tentatively identified compound is a suspected aldol-condensation product.**
X:	**This flag indicates that the analyte was diluted below an accurate quantitation level.**
***:**	**This flag indicates that a spike recovery is outside the control criteria.**
+:	**This flag indicates that the relative percent difference (RPD) exceeds the control criteria.**

INORGANICS CASE NARRATIVE

URS

Cistern Excavation

Order Number - 0810031

1. This report consists of 2 water samples.
2. The samples were received intact on 10/03/08. The temperature of the samples upon receipt ranged from 4.0^{o} to 7.0^{o} Celsius.
3. The samples had been correctly preserved for the requested analyses.
4. The samples were prepared for analysis based on Methods for the Chemical Analysis of Waters and Wastes (MCAWW), May 1994 procedures and Environmental Monitoring Systems Laboratory (EMSL) Rev 2.1 procedures.
5. The samples were analyzed following MCAWW and EMSL procedures for the following methods:

Analyte	Method	SOP #
Alkalinity	310.1	1106 Rev 6
Bicarbonate	310.1	1106 Rev 6
Carbonate	310.1	1106 Rev 6
Nitrate/nitrite as N	353.2	1127 Rev 6
pH	150.1	1126 Rev 16
Specific conductance	120.1	1128 Rev 9
Sulfide	376.1	1120 Rev 5
TDS	160.1	1101 Rev 10
Bromide	300.0	1113 Rev 11
Chloride	300.0	1113 Rev 11
Fluoride	300.0	1113 Rev 11
Sulfate	300.0	1113 Rev 11

6. All standards and solutions were used within their recommended shelf life.
7. The samples were prepared and analyzed within the established hold time for each analysis.

All in house quality control procedures were followed, as described below.

8. General quality control procedures.

- A preparation (method) blank and laboratory control sample (LCS) were prepared and analyzed with the samples in each applicable preparation batch. There were not more than 20 samples in each preparation batch.
- The method blank associated with each applicable batch was below the reporting limit for the requested analytes. This indicates that no contaminants were introduced to the samples during preparation and analysis.
- The LCS was within the acceptance limits for each applicable analysis.
- All initial and continuing calibration blanks (ICB/CCB) associated with each applicable analytical batch were below the reporting limit for the requested analytes.
- All initial and continuing calibration verifications (ICV/CCV) associated with each applicable analytical batch were within the acceptance criteria for the requested analytes. This indicates a valid calibration and stable instrument conditions.

9. Matrix specific quality control procedures.

   Sample 0810031-1 was designated as the quality control sample for the nitrate/nitrite as N, pH, and specific conductance analyses. Per method requirements, matrix QC was performed for the remaining analyses. Since a sample from this order number was not the selected quality control (QC) sample, matrix specific QC results are not included in this report.

   Similarity of matrix and therefore relevance of the QC results should not be automatically inferred for any sample other than the native sample selected for QC.

   - A matrix spike (MS) and matrix spike duplicate (MSD) were prepared and analyzed with the nitrate/nitrite as N batch. All guidance criteria for precision and accuracy were met.
   - A sample duplicate was prepared and analyzed with the ph and specific conductance batches. All guidance criteria for precision were met.

10. It was necessary to dilute the samples in order to bring the chloride concentrations into the analytical range of the ion chromatograph (IC).

    Reduced aliquots were taken of the samples for the alkalinity, bicarbonate, and carbonate analysis. Reporting limits were elevated accordingly.

11. Manual integrations are performed when needed to provide consistent and defensible data following the guidelines in Paragon Analytics Standard Operating Procedure 939 Revision 3. Whenever manual integrations are performed, before and after chromatograms of the peak that were manually integrated are included in the report along with the reason why the re-integration was necessary.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Inorganic Data Reporting Qualifiers

The following qualifiers are used by the laboratory when reporting results of inorganic analyses.

- Concentration qualifier -- A "J" is entered if the reported value was obtained from a reading that was less than the Reporting Limit but greater than or equal to Paragon's Method Detection Limit. If the analyte was analyzed for but not detected a "U" is entered.

- QC qualifier -- Specified entries and their meanings are as follows:

  N - Spiked sample recovery not within control limits.

  * - Duplicate analysis (relative percent difference) not within control limits.

  Z - Calibration spike recovery not within control limits.

DX-120 Detector Parameters

Detector Type : DX-120
Data collection time (minutes) : 13.00
Data Collection Rate : 5.00
Real time plot scale maximum (μS) : 40.000
Real time plot scale minimum (μS) : -3.000

DX-120 Integration Parameters

Peak detection algorithm : Standard
Starting peak width (seconds) : 8.00
Peak threshold : 0.50
Peak area reject (area counts) : 800.00
Reference peak area reject (area counts) : 800.00

DX-120 Smoothing Parameters

Filter Type : No filter

DX-120 Report Data

Report Format File : C:\PeakNet\method\Default2.rpt
Print Sample Analysis : Yes
Print Calibration Update : Yes
Print Check Standard : No
System Suitability Tests :
No system suitability tests selected.

DX-120 Integration Data Events

Time	Description
0.00	Stop peak detection
0.05	Force baseline at start of all peaks
1.90	Start peak detection
2.20	Void volume treatment for this peak
3.00	Void volume treatment for this peak

DX-120 Calibration Parameters

External or internal calibration : EXTERNAL
Number of replicates for calibration : 1
Rejection : Manual
Level Weighting : Equal
Calibration standard volume : 1.00
Default sample volume : 1.00
Amount units : ug/L
Replace retention time : Yes
Update response : Yes
Default dilution factor : 1.00
Default response factor for unknown peaks : 0.00
Calculate unknowns by area or height : Area

DX-120 Component Identification Table

Component	Retention	Tolerance	Reference
Fluoride	3.12 min	5.00 %	
Chloride	4.25 min	5.00 %	
Nitrite as N	5.04 min	4.90 %	
Bromide	6.25 min	7.30 %	
Nitrate as N	7.23 min	10.00 %	
Orthophosphate as P	8.92 min	4.10 %	
Sulfate	10.47 min	4.10 %	
Nitrate/Nitrite as N	20.00 min	5.00 %	

DX-120 Component Quantitation Table

Component	Retention	Low Limit	High Limit
Fluoride	3.12 min	100	10000
Chloride	4.25 min	200	20000
Nitrite as N	5.04 min	100	10000
Bromide	6.25 min	200	20000
Nitrate as N	7.23 min	200	20000
Orthophosphate as P	8.92 min	300	20000
Sulfate	10.47 min	500	100000
Nitrate/Nitrite as N	20.00 min	0	0

DX-120 Component Calibration Table

Component	Retention Time	Curve Fit	Origin	Cal. by	Response Component	Relative Factor
Fluoride	3.12 min	Quadratic	Ignore	Area		0.00
Chloride	4.25 min	Quadratic	Ignore	Area		0.00
Nitrite as N	5.04 min	Quadratic	Ignore	Area		0.00
Bromide	6.25 min	Quadratic	Ignore	Area		0.00
Nitrate as N	7.23 min	Quadratic	Ignore	Area		0.00
Orthophosphate as P	8.92 min	Quadratic	Ignore	Area		0.00
Sulfate	10.47 min	Quadratic	Ignore	Area		0.00
Nitrate/Nitrite as N	20.00 min	—	Ignore	Area	Fluoride	0.00

DX-120 Component = Fluoride Levels Table

Retention Time : 3.12 min

Comment:
BatchDx created schedule. Analyst: 10/9/08 JBM 10/10/08
Instrument #1: DIONEX DX-120. ID Serial Number: 99060762
Analytical Column: Dionex IonPac AS14 S/N 022150
Methods: EPA 300.0 and SW9056. Paragon SOP 1113
Eluent: Made daily, 10mL of Eluent Concentrate ID: RG080610-2 to 1000mL of DI water.

Schedule File: C:\PeakNet\schedule\081008.sch

METALS CASE NARRATIVE

URS

Cistern Excavation

Order Number - 0810031

1. This report consists of 2 water samples.
2. The samples were received intact on 10/03/08. The samples were received at temperatures of 4°C and 7°C.
3. The samples had a pH less than 2 upon receipt.
4. The samples were prepared for analysis based on SW-846, 3rd Edition procedures.

   For analysis by Trace ICP and ICP-MS, the samples were digested following method 3005A and PA SOP 806 Rev. 13.

   For analysis by Cold Vapor AA (CVAA), the samples were digested following method 7470A and PA SOP 812 Rev. 14.
5. The samples were analyzed following SW-846, 3rd Edition procedures.

   Analysis by Trace ICP followed method 6010B and PA SOP 834 Rev. 7.

   The relationship between intensity and concentration for each element is established using at least four standards, one of which is a blank solution.

   During sample analysis concentrations are computed by the software and the results are printed in mg/L. The instrument software does not provide a printout which gives both intensity and concentration. The validity of the calibration equation is tested by analyzing the following solutions: a blank, a low level check solution with concentrations near the reporting limit, an Initial Calibration Verification (ICV) standard from a 2nd source standard solution with concentrations near the middle of the analytical range, a Continuing Calibration Verification (CCV) standard with concentrations at two times those in the ICV, and a readback of the highest calibration standard.

   These solutions provide verification that the calibration equations are functioning properly throughout the analytical range of the instrument. During sample analysis dilutions are made for analytes found at concentrations above the highest calibration standard. No results are taken from extrapolations beyond the highest standard.

Analysis by ICP-MS followed method 6020A and PA SOP 827 Rev. 6.

The relationship between intensity and concentration for each element is established using at least four standards, one of which is a blank solution. A calibration equation relating instrument response to concentration is developed by the instrument software. The equation is a higher order polynomial. This type of equation is used to improve quantitation accuracy at lower concentrations where the relationship between concentration and instrument response is non-linear.

During sample analysis concentrations are computed by the software and the results are printed in ug/L. The validity of the calibration equation is tested by analyzing the following solutions: a blank, a low level check solution with concentrations near the reporting limit, an Initial Calibration Verification (ICV) standard from a 2nd source standard solution with concentrations near the middle of the analytical range, a Continuing Calibration Verification (CCV) standard with concentrations near the middle of the analytical range but different than those in the ICV, and a readback of the highest calibration standard.

These solutions provide verification that the calibration equations are functioning properly throughout the analytical range of the instrument. During sample analysis dilutions are made for analytes found at concentrations above the highest calibration standard. No results are taken from extrapolations beyond the highest standard.

Analysis by CVAA followed method 7470A and PA SOP 812 Rev. 14.

The relationship between intensity and concentration is determined daily, prior to sample analysis. At least five standards and a blank solution are analyzed to establish the calibration curve. The instrument software performs a linear regression to fit the calibration data to a curve of the form:

$$conc. = B * I + C$$

where: conc. = concentration

B = slope coefficient

I = intensity

C = intercept coefficient

A printout summarizing the calibration data supplies the calibration curve and correlation coefficient. During sample analysis both intensity and concentration values are printed. Dilutions are made for concentrations above the highest calibration standard. No results are taken from extrapolations above the highest standard.

6. All standards and solutions are NIST traceable and were used within their recommended shelf life.

7. The samples were prepared and analyzed within the established hold times.

All in house quality control procedures were followed, as described below.

8. General quality control procedures.

   - A preparation (method) blank and laboratory control sample were digested and analyzed with the samples in each digestion batch. There were not more than 20 samples in each digestion batch.
   - The preparation (method) blank associated with each digestion batch was below the practical quantitation limit for each requested analyte.
   - The laboratory control sample associated with each digestion batch was within the acceptance limits. This indicates complete digestion according to the method.
   - All initial and continuing calibration blanks associated with each analytical batch were below the practical quantitation limits for the requested analytes.
   - All initial and continuing calibration verifications associated with each analytical batch were within the acceptance criteria for the requested analytes. This indicates a valid calibration and stable instrument conditions.
   - The high standard readbacks associated with Method 6010B and 6020A analyses were within acceptance criteria.
   - The interference check samples associated with Method 6010B were within acceptance criteria.
   - The interference check samples associated with Method 6020A were analyzed.

9. Matrix specific quality control procedures.

   Sample 0810031-2 was designated as the quality control sample for the mercury analysis. Per method requirements, matrix QC was performed for the Trace ICP and ICP-MS analyses. Since a sample from this client was not the selected quality control (QC) sample, matrix specific QC results are not included in this report.

   Similarity of matrix and therefore relevance of the QC results should not be automatically inferred for any sample other than the native sample selected for QC.

   - A matrix spike and matrix spike duplicate were digested and analyzed with the mercury batch. All acceptance criteria for accuracy were met.
   - A sample duplicate and matrix spike duplicate were digested and analyzed with the mercury batch. All acceptance criteria for precision were met.

10. It is a standard PA practice that samples for ICP-MS are analyzed at a 10X dilution.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Inorganic Data Reporting Qualifiers

The following qualifiers are used by the laboratory when reporting results of inorganic analyses.

- Result qualifier -- A "B" is entered if the reported value was obtained from a reading that was less than the Practical Quantitation Limit but greater than or equal to the Method Detection Limit (MDL). If the analyte was analyzed for but not detected a "U" is entered.

- QC qualifier -- Specified entries and their meanings are as follows:

  E - The reported value is estimated because of the presence of interference. An explanatory note may be included in the narrative.

  M - Duplicate injection precision was not met.

  N - Spiked sample recovery not within control limits. A post spike is analyzed for all ICP analyses when the matrix spike and or spike duplicate fail and the native sample concentration is less than four times the spike added concentration.

  Z - Spiked recovery not within control limits. An explanatory note may be included in the narrative.

  * - Duplicate analysis (relative percent difference) not within control limits.

  S - SAR value is estimated as one or more analytes used in the calculation were not detected above the detection limit.

Raw Data

HEADER INFROMATION FOR ANALYTICAL SEQUENCE 081008A

STANDARD SOLUTION CODES

Stock A (ST080626-1) Exp. 1-23-09

Element	ug/ml
Al, Ca, Mg	1000
Na, K	500
Fe	400
Li	10

Standard	Dilution	Procedure
A1	1/2 of Stock A	5ml of Stock A to 10ml final volume.
A2	1/10 of A1	1ml of Standard A1 up to a 10ml final volume.
A3	1/10 of A2	1ml of Standard A2 up to a 10ml final volume.

Stock B (ST080626-2) Exp. 12-31-08

Element	ug/ml
P, Si	100
B, Ba, Cr, Cu, Mn, Mo, Ni, Pb, Sn, Sr, Ti ,Zn	20
As, Cd, Co, Se, Tl, V	10
Ag, Sb	4
Be	2

Stock Ag- 1000 ug/ml (ST071101-9) Exp. 1-23-09
Stock Th – 1000 ug/ml (ST071101-10) Exp. 1-23-09

The following dilutions of Stock Ag and Stock Th are made to provide the daily calibration Standards.

Standard	Dilution	Procedure
B1	1/2 of Stock B 1/500 Ag and 1/500 Th	5ml of Stock B and 0.02ml of Stock Ag and Stock Th up to a 10ml final volume.
B2	1/10 of B1	1.0ml of Standard B1 up to a 10ml final volume.
B3	1/10 of B2	1.0ml of Standard B2 up to a 10ml final volume.

Stock C (ST0080626-3) Exp. 1-23-09

Element	ug/ml
S, U	100
Bi, Zr	10

Standard	Dilution	Procedure
C1	1/2 of Stock C	5ml of Stock C up to a 10ml final volume.
C2	1/10 of C1	1.0ml of Standard C1 up to a 10ml final volume.
C3	1/10 of C2	1.0ml of Standard C2 up to a 10ml final volume.

RL STD (Reporting Limit Standard) Intermediate.
(ST071101-8) Exp. 12-31-2008

Element	ug/ml
K, Na	500
Ca, Mg	200
Al, U	100
B, Fe, P, S, Si	50
Li, Mo, Sn, Sr, Ti	10
Sb	8
Ni, As, Bi, Se, Th, Tl, Zn, Zr	5
Pb	3
Ag, Ba, Co, Cr, Cu, Mn, V	2
Be, Cd	1

RL STD (working standard) made daily by diluting the intermediate above 1000 fold. This working standard had concentration levels at the normal Paragon reporting limits for all elements except Ca, Mg and Na, K which are at 0.2ppm and 0.5ppm, this is below the normal Paragon reporting limit.

Blank Solution

Double D.I. water, 3% HNO_3 and 5%HCl
Used for Std. Blank, ICB and CCB

CCV (ST080926-3) Exp. 1-10-10

Element	ug/ml
Al, Ca, Mg, K, Na	50
Fe	20
U, P, S, Si	5
B, Ba, Cr, Cu, Mn, Mo, Ni, Pb, Se, Sn, Zn, Zr	1
As, Be, Bi, Cd, Co, Li, Sb, Sr, Ti, Tl, V	0.5
Ag, Th	0.2

ICV (ST080926-3) Exp. 1-10-10
Prepared daily by diluting the CCV (described above) ½.
The 1/2 dilution is made by diluting 5ml of the CCV to a 10ml final volume.
The resulting concentrations are:

Element	ug/ml
Al, Ca, Mg, K, Na	25
Fe	10
U, P, S, Si	2.5
B, Ba, Cr, Cu, Mn, Mo, Ni, Pb, Se, Sn, Zn, Zr	0.5
As, Be, Bi, Cd, Co, Li, Sb, Sr, Ti, Tl, V	0.25
Ag, Th	0.1

CRI (ST080813-6) Exp. 1-10-10
Made By diluting
1.0ml of CRI Stock (ST080813-2) Exp. 1-10-10
to a 100ml final volume.

Element	ug/ml
Ca, Mg, K, Na	5.0
Al, Ba	0.4
B, Fe, U, P, S,V	0.2
Sb	0.12
Co, Si,, Sn	0.1
Ni	0.08
Cu, Bi, Zr	0.05
Zn	0.04
Mn	0.03
Ag, Cr, Li, Mo, Sr, Ti, Tl	0.02
Be, Cd, As, Se, Th, Pb	0.01

ICSA (ST080813-3) Exp. 9-13-09

Element	ug/ml
Ca, Mg, Al	250
Fe	100

ICSAB (ST080813-4) Exp. 1-23-09

Element	ug/ml
Ca, Mg, Al	250
Fe	100
U	10
B, Si, Li, Mo, Sn, Sr, Ti, Cd, Zn, Ni, Ag, P, S	1.0
Sb	0.6
Ba, Be, Co, V, Cr, Cu, Mn, Bi, Zr	0.5
Ag	0.2
As, Tl	0.1
Se, Pb, Th	0.05

Pipette ID Numbers

1.0ml to 5.0ml --- M-55
0.1ml to 1.0ml --- M-61
0.01ml to 0.1ml --- M-57

Acid Lot Numbers

HCl – G05039
HNO_3 – G04026

Inter Element Correction Information

The following table summarizes spectral interferences that have been identified and for which IEC's are used. If a sample contains a concentration of an interfering element that exceeds the upper analytical range, and an affected element is being determined, it is necessary to dilute the sample to bring the interfering element into analytical range.

Interfering Element (ug/ml)	Affected Element
Al (500)	Se, Pb
Mg (500)	Th, Zn
Fe (200)	Se, Tl, V, Pb, U
Si (50)	Zr
U (50)	Al, Cr, Cu, Bi, Pb, Mg, Se, Ag, Tl, Si
Ba (10)	Co
Cr (10)	Sb
Cu (10)	Bi
Mn (10)	Tl, Se
Mo (10)	Al, Si, Pb,, Sb
Ti (10)	Co, Bi, Si, Sn, Tl, Pb, Zr
As (5)	Cd
V (5)	Al, Be, Tl
Zr (5)	Ag

The following table lists element concentrations (ug/ml) that no significant spectral interferences have been observed.

Element	Concentration	Element	Concentration	Element	Concentration
K	500	Se	10		
Na	500	Pb	10	Li	5
Ca	500	Zn	10	Cd	5
P	50	Sr	10	Co	5
S	50	Sn	10	Ag	2
Ni	10	Bi	5	Sb	2
B	10	Tl	5	Be	1

2X – Dilution made by diluting 2.5ml of sample up to a 5ml final volume.
3X - Dilution made by diluting 2.0ml of sample up to a 6ml final volume.
4X - Dilution made by diluting 2.0ml of sample up to a 8ml final volume.
5X - Dilution made by diluting 1.0ml of sample to a 5ml final volume.
10X - Dilution made by diluting 0.5ml of sample to a 5ml final volume.
20X – Dilution made by diluting 0.25ml of sample to a 5ml final volume.
25X – Dilution made by diluting 0.2ml of sample to a 5ml final volume.
50X – Dilution made by diluting 0.1ml of sample to a 5ml final volume.
100X – Dilution made by diluting 0.05ml of sample to a 5ml final volume.
500X – Dilution made by diluting 0.02ml of sample to a 10ml final volume.
1000X – Dilution made by diluting a 10X dilution 100X.

Analytical Spikes

0809173-21 – Post spiked for K at 80ppm by diluting 0.2ml of Cation spike(ST080818-5) up to a 5ml final volume with a 2 fold dilution of sample digestate.

0809174-15 – Post spiked for K at 80ppm by diluting 0.2ml of Cation spike(ST080818-5) up to a 5ml final volume with a 2 fold dilution of sample digestate.

Comments

1. Please see run log and work orders for elements of interest.

Daily Maintenance

1. Check/ Change Peristaltic pump tubing.
2. Check the torch for deposits, clean if necessary.
3. Check/ Empty drain water.

Daily Maintenance done by _____RF_____.

Monthly Maintenance

1. Check/Clean nebulizer and spray chamber.
2. Clean air filters
3. Check/Clean entrance slit.
4. Fill water recirculating reservoir.

Monthly maintenance done by: RF 10-1-08.

Major problems / adjustments / repairs recorded in the ICP Maintenance Log (3716).

HEADER INFROMATION FOR ANALYTICAL SEQUENCE MS081008A

STANDARD SOLUTIONS

ST080818-14 = 40 PPM - Al; 10 PPM - Pb; 4 PPM - As, Se; 2 PPM – Cd, Ag, Sb, U, Mo; 0.1 PPM – Tl, Th.
EXPIRES: 01/10/10.

CALIBRATION STANDARDS

HIGH STD (200 ppb - Al; 50 ppb - Pb; 20 ppb - As, Se; 10ppb – Cd, Ag, Sb, U, Mo; 0.5ppb – Tl, Th.) Made daily by diluting (ST080818-14) 200 fold, (0.05ml up to a 10 ml final volume).

HIGH/2 LEVEL STD (100 ppb - Al; 25 ppb - Pb; 10 ppb - As, Se; 5ppb –Cd, Ag, Sb, U, Mo; 0.25ppb – Tl, Th.) Made daily by diluting 5.0ml of the HIGH STD calibration standard up to a 10ml final volume, (400 fold dilution of ST080818-14).

MID LEVEL STD (40 ppb - Al; 10 ppb - Pb; 4 ppb - As, Se; 2ppb –Cd, Ag, Sb, U, Mo; 0.1ppb – Tl, Th.) Made daily by diluting 2.0ml of the HIGH STD calibration standard up to a 10ml final volume, (1000 fold dilution of ST080818-14).

LOW LEVEL STD (20 ppb - Al; 5 ppb - Pb; 2 ppb - As, Se; 1ppb – Cd, Ag, Sb, U, Mo; 0.05ppb – Tl, Th) Made daily by diluting 1.0ml of the HIGH STD calibration standard up to a 10ml final volume, (2000 fold dilution of ST080818-14).

LOW/2 LEVEL STD (10 ppb - Al; 2.5 ppb - Pb; 1 ppb - As, Se; 0.5ppb –Cd, Ag, Sb, U, Mo; 0.025ppb – Tl, Th.) Made daily by diluting 0.5ml of the HIGH STD calibration standard up to a 10ml final volume, (4000 fold dilution of ST080818-14).

LOW/10 LEVEL STD (2 ppb - Al; 0.5 ppb - Pb; 0.2 ppb - As, Se; 0.1ppb –Cd, Ag, Sb, U, Mo; 0.005ppb – Tl, Th.) Made daily by diluting 1.0ml of the LOW LEVEL STD calibration standard up to a 10ml final volume, (20,000 fold dilution of ST080818-14).

LOW/20 LEVEL STD (1 ppb - Al; 0.25 ppb - Pb; 0.1 ppb - As, Se; 0.05ppb –Cd, Ag, Sb, U, Mo; 0.0025ppb – Tl, Th.) Made daily by diluting 0.5ml of the LOW LEVEL STD calibration standard up to a 10ml final volume, (40,000 fold dilution of ST080818-14).

LOW/100 LEVEL STD (0.2 ppb - Al; 0.05 ppb - Pb; 0.02 ppb - As, Se; 0.01ppb –Cd, Ag, Sb, U, Mo; 0.0005ppb – Tl, Th.) Made daily by diluting 1.0ml of the LOW/10 LEVEL STD calibration standard up to a 10ml final volume, (200,000 fold dilution of ST080818-14).

INTERFERENCE CHECK SOLUTIONS

ICSA Made daily by diluting 0.1ml of (ST071130-3--EXPIRES: 11/01/08) up to a 10ml final volume, (100 fold dilution). The ICSA working solution contains the following elements and concentrations:

Element	Concentration (PPM)
Cl	212.15
Ca	30
Fe,Na	25
C	20
Al,K,Mg,P,S	10
Mo,Ti	0.2

ICSAB Made daily by diluting 0.1ml of (ST071130-3--EXPIRES: 11/01/08) and 2ml of the HIGH STD calibration standard up to a 10ml final volume. (This solution is a 100 fold dilution of ST071130-3 and a 1000 fold dilution of ST080818-14.) The ICSAB working solution contains the following elements and concentrations:

Element	Concentration (PPM)
Cl	212.15
Ca	30
Fe,Na	25
C	20
Al,K,Mg,P,S	10
Mo,Ti	0.2
Pb	0.01
As,Se	0.004
Ag,Sb,U,Cd	0.002
Tl,Th	0.0001

NOTE: When analyzing for As and/or Se, the ICSA and ICSAB solutions are passed through a cation exchange column.

ICSA_MO – Direct analysis of (ST080818-15 Expires 01-10-10). This solution is custom and made to be as close as possible to the ICSA above, without Mo. This ICSA working solution contains the following elements and concentrations:

Element	Concentration (PPM)
Ca	30
Fe,Na	25
Al,K,Mg,P	10
Ti	0.2

ICSAB_MO Made daily by diluting 0.04ml of (ST071130-7--EXPIRES: 01/23/09) up to a 10ml final volume with ICSA (Mo) solution above (ST080818-15 Expires 01-10-10). (This solution is a 250 fold dilution of ST071130-7.) This ICSAB working solution contains the following elements and concentrations:

Element	Concentration (PPM)
Ca	30
Fe,Na	25
Al,K,Mg,P	10
Ti	0.2
Mo	0.002
Pb	0.01
As,Se	0.004
Ag,Sb,U,Cd	0.002
Tl,Th	0.0001

CALIBRATION CHECK STANDARDS

ICV Made daily by diluting ICV second source intermediate (ST071130-7--EXPIRES: 01/23/09) 200 fold, (0.05ml up to a 10ml final volume). The ICV working solution contains the following elements and concentrations:

Element	Concentration (ppb)
Al	50
Pb	12.5
As,Se	5
Ag,Sb,U,Mo,Cd	2.5
Tl,Th	0.125

CCV Made daily by diluting 2.0ml of the HIGH STD calibration standard up to a 10ml final volume, (1000 fold dilution of ST080818-14). The CCV working solution contains the following elements and concentrations:

Element	Concentration (ppb)
Al	40
Pb	10
As,Se	4
Ag,Sb,U,Mo,Cd	2
Tl,Th	0.1

CRI_LOW/100 Re-analysis of the LOW/100 LEVEL STD (made daily as described above). The CRI working solution contains the following elements and concentrations:

Element	Concentration (ppb)
Al	0.2
As,Se	0.02
U,Mo,Cd,Ag,Sb	0.01
Pb	0.05
Tl,Th	0.0005

CRI_LOW/20 Re-analysis of the LOW/20 LEVEL STD (made daily as described above). The CRI working solution contains the following elements and concentrations:

Element	Concentration (ppb)
Al	1.0
As,Se	0.1
U,Mo,Cd,Ag,Sb	0.05
Pb	0.25
Tl,Th	0.0025

CRI_LOW/10 Re-analysis of the LOW/10 LEVEL STD (made daily as described above). The CRI working solution contains the following elements and concentrations:

Element	Concentration (ppb)
Al	2.0
As,Se	0.2
U,Mo,Cd,Ag,Sb	0.1
Pb	0.5
Tl,Th	0.0050

BLANK

ICB / CCB and all diluent – 1% HNO_3, 1% HCl in double deionized water.

INTERNAL STANDARDS

Internal Standard Intermediate (ST070904-12 --EXPIRES: 08/16/09) contains 1 PPM each of Bi, Rh, In; and 2 PPM each of Ga, Pt. This intermediate is added to all standards and samples in the same proportion of 1 on top of 100. Most often this is done by adding 0.05ml of Internal Standard Intermediate on top of 5ml of sample or standard. The final concentration of internal standard in the working solutions or samples is about 10 ppb In, Rh, Bi; and 20 ppb Ga, Pt.

ACID LOT NUMBERS

HNO_3 – G04026
HCl – G05039

PIPET ID NUMBERS

1.0 to 5.0ml -- M-66
0.1 to 1.0ml – M-60
0.01 to 0.1ml -- M-56

DILUTIONS

2X dilutions made by diluting 5ml of sample to a 10ml final volume.
5X dilutions made by diluting 1ml of sample to a 5ml final volume.
10X dilutions made by diluting 1ml of sample to a 10ml final volume.
50X dilutions made by diluting 0.1ml of sample to a 5ml final volume.
100X dilutions made by diluting 0.1ml of sample to a 10ml final volume.
200X dilutions made by diluting 0.05ml of sample to a 10ml final volume.

ANALYTICAL SPIKES

None in this sequence.

DAILY MAINTENANCE ITEMS

1. Check / change pump tubing
2. Check / empty drain containers
3. Tune instrument per manufacturer's procedures
4. Perform ten minute stability test (include results with data package)

MONTHLY MAINTENANCE ITEMS

1. Check / clean torch and cones for deposits
2. Check / clean nebulizer and spray chamber
3. Check / fill water recirculating reservoirs
4. Check / fill vacuum pump oil

COMMENTS

The IDL / MDL working solution contains the following elements and concentrations:

75	08OCT08A 75	RINSE							

Compound 3 name: 78Se
Coefficient of Determination: 0.999969
Calibration curve: -3.72885e-7 * x^3 + 1.39905e-5 * x^2 + 0.00180608 * x + 0.000108930
Response type: Internal Std (Ref 2), Area * (IS Conc. / IS Area)
Curve type: 3rd Order, Origin: Exclude, Weighting: 1/x, Axis trans: None

Compound 6 name: 1Cadmium
Coefficient of Determination: 0.999985
Calibration curve: -1.20983e-5 * x^3 + 0.000190552 * x^2 + 0.00830794 * x + 1.08663e-5
Response type: Internal Std (Ref 1), Area * (IS Conc. / IS Area)
Curve type: 3rd Order, Origin: Exclude, Weighting: 1/x, Axis trans: None

Compound 9 name: 121Sb
Coefficient of Determination: 0.999995
Calibration curve: -1.16699e-5 * x^3 + 0.000213105 * x^2 + 0.0285382 * x + 0.000320962
Response type: Internal Std (Ref 1), Area * (IS Conc. / IS Area)
Curve type: 3rd Order, Origin: Exclude, Weighting: 1/x, Axis trans: None

Compound 12 name: 205Tl
Coefficient of Determination: 0.999983
Calibration curve: -0.0551630 * x^3 + 0.0436648 * x^2 + 0.0690032 * x + 5.20770e-5
Response type: Internal Std (Ref 7), Area * (IS Conc. / IS Area)
Curve type: 3rd Order, Origin: Exclude, Weighting: 1/x, Axis trans: None

Compound 18 name: 0Lead
Coefficient of Determination: 0.999999
Calibration curve: -4.07401e-6 * x^3 + 0.000237389 * x^2 + 0.116450 * x + 0.000219084
Response type: Internal Std (Ref 7), Area * (IS Conc. / IS Area)
Curve type: 3rd Order, Origin: Exclude, Weighting: 1/x, Axis trans: None

Compound 19 name: 75As
Coefficient of Determination: 0.999990
Calibration curve: -7.96157e-7 * x^3 + 2.58969e-5 * x^2 + 0.00630453 * x + 0.000205807
Response type: Internal Std (Ref 2), Area * (IS Conc. / IS Area)
Curve type: 3rd Order, Origin: Exclude, Weighting: 1/x, Axis trans: None

Compound 20 name: 98Mo
Coefficient of Determination: 0.999992
Calibration curve: -2.25186e-5 * x^3 + 0.000365356 * x^2 + 0.0233703 * x + 1.89256e-6
Response type: Internal Std (Ref 2), Area * (IS Conc. / IS Area)
Curve type: 3rd Order, Origin: Exclude, Weighting: 1/x, Axis trans: None

Compound 25 name: 2Uranium
Coefficient of Determination: 0.999995
Calibration curve: -0.000106355 * x^3 + 0.00141521 * x^2 + 0.128810 * x + 3.35190e-5
Response type: Internal Std (Ref 7), Area * (IS Conc. / IS Area)
Curve type: 3rd Order, Origin: Exclude, Weighting: 1/x, Axis trans: None

Compound 26 name: 55Mn
Coefficient of Determination: 0.999999
Calibration curve: -1.87738e-6 * x^3 + 0.000132594 * x^2 + 0.128209 * x + 0.0275164
Response type: Internal Std (Ref 13), Area * (IS Conc. / IS Area)
Curve type: 3rd Order, Origin: Exclude, Weighting: 1/x, Axis trans: None

Header Information for Analytical Run:08101301

Analyst: SL

Standards:

Stock A: 10ppm (ST080815-3)
Stock B: 10ppm (ST080815-4)
Daily standards made by diluting stock solution 100X

Reagents:

See digestion log

Pipettes Used:

M-57 - 0.01 mL to 0.1 mL
M-55 - 1.0 mL to 5.0 mL
M-61 - 0.1 mL to 1.0 mL

Method of Dilution:

2X - Dilution made by diluting 5ml of sample to 10ml final volume.
5X - Dilution made by diluting 2.0ml of sample to 10ml final volume.
10X - Dilution made by diluting 1.0ml of sample to 10ml final volume.
20X - Dilution made by diluting 0.5ml of sample to 10ml final volume.
50X - Dilution made by diluting 0.2ml of sample to 10ml final volume.
100X - Dilution made by diluting 0.1ml of sample to 10ml final volume.
500X - Dilution made by diluting a 5X dilution 100X
1000X – Dilution made by diluting a 10X dilution 100X

Daily Maintenance:

1. Check / Change peristaltic pump tubing
2. Check gas liquid separator for deposits, clean if necessary
3. Check / Refill rinse water and stannous chloride reservoirs

Daily Maintenance done by: SL

Monthly Maintenance:

1. Check / Clean sample and reference cells
2. Check / Change Nafion drying cartridge

Monthly Maintenance done by: SL10-10-2008

OIL AND GREASE CASE NARRATIVE

URS

Cistern Excavation

Order Number - 0810031

1. This report consists of 2 water samples. The samples were received cool and intact on 10/03/2008. The water samples did not have a pH less than 2 upon receipt.
2. The samples were prepared and analyzed according to EPA Method 1664A procedures utilizing PA SOP 671 Rev. 6.
3. The samples were prepared and analyzed within the established hold times.
4. The method blank associated with this project was below the reporting limit for oil and grease.
5. All laboratory control spike and laboratory control spike duplicate recoveries and RPDs were within the acceptance criteria.
6. A matrix spike and matrix spike duplicate could not be performed because of insufficient sample. A laboratory control spike and laboratory control spike duplicate were performed instead.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Data Qualifier Flags
Chromatography and Mass Spectrometry

U or ND:	**This flag indicates that the compound was analyzed for but not detected.**
J:	**This flag indicates an estimated value. This flag is used as follows : (1) when estimating a concentration for tentatively identified compounds (TICs) where a 1:1 response is assumed; (2) when the mass spectral and retention time data indicate the presence of a compound that meets the volatile and semivolatile GC/MS identification criteria, and the result is less than the reporting limit (RL) but greater than the method detection limit (MDL); (3) when the data indicate the presence of a compound that meets the identification criteria, and the result is less than the RL but greater than the MDL; and (4) the reported value is estimated.**
B:	**This flag is used when the analyte is detected in the associated method blank as well as in the sample. It indicates probable blank contamination and warns the data user. This flag shall be used for a tentatively identified compound (TIC) as well as for a positively identified target compound.**
E:	**This flag identifies compounds whose concentration exceeds the upper level of the calibration range.**
A:	**This flag indicates that a tentatively identified compound is a suspected aldol-condensation product.**
X:	**This flag indicates that the analyte was diluted below an accurate quantitation level.**
***:**	**This flag indicates that a spike recovery is outside the control criteria.**
+:	**This flag indicates that the relative percent difference (RPD) exceeds the control criteria.**

Re: Paragon Workorder: 08-09-141
Client Project Name: Prather Phase 1 Investigation
Client Project Number: None Submitted

Dear Ms. O'Connor:

Three water samples were received from URS on September 19, 2008. The samples were scheduled for the following analyses:

Metals	pages 1-359	Dissolved Gasses	pages 1-42
Inorganics	pages 1-93	GC/MS Volatiles	pages 1-120

The results for these analyses are contained in the enclosed reports.

Thank you for your confidence in Paragon Analytics. Should you have any questions, please call.

Sincerely,

Debbie Fazio

Dissolved Gasses Case Narrative

URS

Prather Phase 1 Investigation

Order Number - 0809141

1. This report consists of 1 water sample. The sample was received cool and intact by Paragon on 09/19/2008.

   The sample was free of headspace prior to analysis.

   The sample had a pH < 2 at the time of analysis.

2. This sample was prepared and analyzed according to method RSK-175 procedures and PA SOP449R0.

3. The preparation batch included a method blank, laboratory control sample, laboratory control sample duplicate, sample duplicate, and matrix spike. Per method requirements, matrix QC was performed for this analysis. The following is a list of samples used for the matrix QC:

Sample ID	QC Type	Batch ID
0809141-1	MS	HC080919-1

   Similarity of matrix and therefore relevance of the QC results should not be automatically inferred for any sample other than the native sample selected for QC.

4. All preparation QC results were within the acceptance criteria.

5. All samples are associated with one or more of the following analytical QC: initial calibrations, initial calibration verifications (ICV), and continuing calibration verifications (CCV).

6. All analytical QC were within the acceptance criteria.

7. Sample dilutions were not required for the requested analyses.

8. The samples were prepared and analyzed within the established holding times.

9. Manual integrations are performed when needed to provide consistent and defensible data following the guidelines in Paragon Analytics Standard Operating Procedure 939

Revision 3. Whenever manual integrations are performed, before and after chromatograms of the peak that was manually integrated are included in the report along with the reason re-integration was necessary.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Data Qualifier Flags
Chromatography and Mass Spectrometry

U or ND:	**This flag indicates that the compound was analyzed for but not detected.**
J:	**This flag indicates an estimated value. This flag is used as follows : (1) when estimating a concentration for tentatively identified compounds (TICs) where a 1:1 response is assumed; (2) when the mass spectral and retention time data indicate the presence of a compound that meets the volatile and semivolatile GC/MS identification criteria, and the result is less than the reporting limit (RL) but greater than the method detection limit (MDL); (3) when the data indicate the presence of a compound that meets the identification criteria, and the result is less than the RL but greater than the MDL; and (4) the reported value is estimated.**
B:	**This flag is used when the analyte is detected in the associated method blank as well as in the sample. It indicates probable blank contamination and warns the data user. This flag shall be used for a tentatively identified compound (TIC) as well as for a positively identified target compound.**
E:	**This flag identifies compounds whose concentration exceeds the upper level of the calibration range.**
A:	**This flag indicates that a tentatively identified compound is a suspected aldol-condensation product.**
X:	**This flag indicates that the analyte was diluted below an accurate quantitation level.**
***:**	**This flag indicates that a spike recovery is outside the control criteria.**
+:	**This flag indicates that the relative percent difference (RPD) exceeds the control criteria.**

CONDITION OF SAMPLE UPON RECEIPT FORM **Paragon Analytics**

Client: URS Workorder No: 0809141

Project Manager: DF Initials: CT Date: 9-19-08

1.	Does this project require any **special handling** in addition to standard Paragon procedures?		YES	(NO)
2.	Are custody **seals** on **shipping containers** intact?	NONE	(YES)	NO
3.	Are Custody seals on **sample containers** intact?	(NONE)	YES	NO
4.	Is there a **COC (Chain-of-Custody) present** or other representative documents?		(YES)	NO
5.	Are the **COC and bottle labels complete and legible**?		(YES)	NO
6.	Is the **COC in agreement** with samples received? (IDs, dates, times, no. of samples, no. of containers, matrix, requested analyses, etc.)		(YES)	NO
7.	Were **airbills / shipping documents** present and/or removable?	DROP OFF	(YES)	NO
8.	Are all aqueous **samples requiring preservation preserved correctly?** (excluding volatiles)	N/A	YES	(NO)
9.	Are all aqueous **non-preserved samples pH 4-9**?	N/A	(YES)	NO
10.	Is there **sufficient sample** for the requested analyses?		(YES)	NO
11.	Were all samples placed in the **proper containers** for the requested analyses?		(YES)	NO
12.	Are all samples within **holding times** for the requested analyses?		(YES)	NO
13.	Were all sample containers received **intact**? (not broken or leaking, etc.)		(YES)	NO
14.	Are all samples requiring **no** headspace (**VOC, GRO, RSK/MEE, Rx CN/S, radon**) headspace free? **Size of bubble**: ✓ < green pea ____ > green pea	N/A	YES	(NO)
15.	Do perchlorate LCMS-MS samples **have** headspace? (at least 1/3 of container required)	(N/A)	YES	NO
16.	Were samples checked for and free from the presence of **residual chlorine?** (Applicable when PM has indicated samples are from a chlorinated water source; note if field preservation with sodium thiosulfate was not observed.)	(N/A)	YES	NO
17.	Were the samples **shipped on ice**?		(YES)	NO
18.	Were cooler temperatures measured at 0.1-6.0°C? **IR gun used*: #2 (#4)**	RAD ONLY	(YES)	NO

Cooler #:	1							
Temperature (°C):	4.0							
No. of custody seals on cooler:	1							
DOT Survey/ Acceptance Information — External µR/hr reading:	14							
Background µR/hr reading:	12							

Were external µR/hr readings ≤ two times background and within DOT acceptance criteria? (YES) / NO / NA (If no, see Form 008.)

Additional Information: PROVIDE DETAILS BELOW FOR A NO RESPONSE TO ANY QUESTION ABOVE, EXCEPT #1 AND #16.

0809141-3-1 - Headspace

Sulfide bottle was at pH 7 - NO further preservation performed as directed by URS-

If applicable, was the client contacted? **YES / NO / NA** Contact: _____ Date/Time: _____

Project Manager Signature / Date: Debbie Fazio 9/19/08

4a Express Package Service

Packages up to 150 lbs.

- [x] FedEx Priority Overnight — Next business morning.† Friday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
- [ ] FedEx Standard Overnight — Next business afternoon.* Saturday Delivery NOT available.
- [ ] FedEx First Overnight — Earliest next business morning delivery to select locations.* Saturday Delivery NOT available.
- [ ] FedEx 2Day — Second business day.* Thursday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
- [ ] FedEx Express Saver — Third business day.* Saturday Delivery NOT available.

FedEx Envelope rate not available. Minimum charge: One-pound rate.

* To most locations.

4b Express Freight Service

Packages over 150 lbs.

- [ ] FedEx 1Day Freight* — Next business day.** Friday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
- [ ] FedEx 2Day Freight — Second business day.** Thursday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
- [ ] FedEx 3Day Freight — Third business day.** Saturday Delivery NOT available.

* Call for Confirmation:

** To most locations.

5 Packaging

- [ ] FedEx Envelope*
- [ ] FedEx Pak* — Includes FedEx Small Pak, FedEx Large Pak, and FedEx Sturdy Pak.
- [ ] FedEx Box
- [ ] FedEx Tube
- [x] Other

* Declared value limit $500.

6 Special Handling

Include FedEx address in Section 3.

- [ ] SATURDAY Delivery — Not available for FedEx Standard Overnight, FedEx First Overnight, FedEx Express Saver, or FedEx 3Day Freight.
- [ ] HOLD Weekday at FedEx Location — Not available for FedEx First Overnight.
- [ ] HOLD Saturday at FedEx Location — Available ONLY for FedEx Priority Overnight and FedEx 2Day to select locations.

Does this shipment contain dangerous goods? One box must be checked.

- [x] No
- [ ] Yes — As per attached Shipper's Declaration.
- [ ] Yes — Shipper's Declaration not required.
- [ ] Dry Ice — Dry Ice, 9, UN 1845 ____ x ____ kg

Dangerous goods (including dry ice) cannot be shipped in FedEx packaging.

- [ ] Cargo Aircraft Only

7 Payment *Bill to:*

Enter FedEx Acct. No. or Credit Card No. below.

- [x] Sender — Acct. No. in Section 1 will be billed.
- [ ] Recipient
- [ ] Third Party
- [ ] Credit Card
- [ ] Cash/Check
- [ ] Obtain Recip. Acct. No.

GC/MS Volatiles Case Narrative

URS

Prather Phase 1 Investigation

Order Number - 0809101

1. This report consists of 3 water samples. The samples were received cool and intact by Paragon on 09/19/08. All aqueous samples were free of headspace prior to analysis.

2. These samples were prepared according to SW-846, 3rd Edition procedures. Specifically, the water samples were prepared by purging 10 mL using purge and trap procedures based on Method 5030C.

3. The samples were analyzed using GC/MS with an RTX-624, RTX-VMS, or equivalent capillary column according to Paragon Standard Operating Procedure 525 Revision 12 based on SW-846 Method 8260B. All positive results were quantitated against the initial calibration standards using the internal standard technique. The identification of positive results was achieved by a comparison of the retention time and mass spectrum of the sample versus the daily calibration standard.

4. All initial calibration criteria for SPCC's and CCC's were met. If average response factors were used in the initial calibration, %RSD was ≤15%. If linear or higher order regression calibrations were used in the initial calibration, the coefficient of determination (r^2) ≥0.99.

5. All initial calibrations are verified by comparing a second source standard calibration verification (ICV) against the calibration curve. All target compounds in the second source verification had a %D of less than 25%.

6. All criteria for SPCC's and CCC's were met in daily (continuing) calibration verifications (CCV).

7. Methylene chloride, acetone and 2-butanone are common laboratory contaminants. In order to minimize the levels of these compounds detected in the gc/ms analysis, Paragon has designated its volatile laboratory as a restricted access area. In addition,

the laboratory has been equipped with a dedicated, air intake and exhaust system that operates under positive pressure in order to minimize cross contamination of these compounds. Due to fluctuations in ambient laboratory conditions, reported sample values for common laboratory contaminants may be due to lab contamination even if the compound in question is not detected in the associated method blank.

All method blank criteria were met.

8. All laboratory control spike and laboratory control spike duplicate recoveries and RPDs were within the acceptance criteria.

9. Since a sample from this order number was not the selected quality control (QC) sample, matrix specific QC results are not included in this report.

10. The samples were analyzed within the established holding time.

11. All surrogate recoveries were within acceptance criteria.

12. All internal standard recoveries were within acceptance criteria.

13. Manual integrations are performed when needed to provide consistent and defensible data following the guidelines in Paragon Analytics Standard Operating Procedure 939 Revision 3. The chromatographic data system marks the manual integrations with an m on the quantitation report. Whenever manual integrations are performed, before and after chromatograms of the peak that was manually integrated are included in the report along with the reason why the re-integration was necessary.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Data Qualifier Flags
Chromatography and Mass Spectrometry

U or ND:	**This flag indicates that the compound was analyzed for but not detected.**
J:	**This flag indicates an estimated value. This flag is used as follows : (1) when estimating a concentration for tentatively identified compounds (TICs) where a 1:1 response is assumed; (2) when the mass spectral and retention time data indicate the presence of a compound that meets the volatile and semivolatile GC/MS identification criteria, and the result is less than the reporting limit (RL) but greater than the method detection limit (MDL); (3) when the retention time data indicate the presence of a compound that meets the GC identification criteria, and the result is less than the RL but greater than the MDL; and (4) the reported value is estimated.**
B:	**This flag is used when the analyte is detected in the associated method blank as well as in the sample. It indicates probable blank contamination and warns the data user. This flag shall be used for a tentatively identified compound (TIC) as well as for a positively identified target compound.**
E:	**This flag identifies compounds whose concentration exceeds the upper level of the calibration range.**
A:	**This flag indicates that a tentatively identified compound is a suspected aldol-condensation product.**
X:	**This flag indicates that the analyte was diluted below an accurate quantitation level.**
***:**	**This flag indicates that a spike recovery is equal to or outside the control criteria used.**
+:	**This flag indicates that the relative percent difference (RPD) equals or exceeds the control criteria.**

Table 2 - Aqueous Sample Collection, Handling, and Analysis Summary

Analyte Class	Analysis	Method	Reporting Limit	Holding Time	Bottle and Preservation
Organics	Volatile Organics (including BTEX)	SW8260M extended	Varies by analyte	14 days	3 x 40 ml glass vial, pH < 2 with HCl, ≤6°C
	Methane	RSK-175	1.0 mg/l	7 days	3 x 40 ml glass vial. ≤6°C
Trace and Other Metals	Arsenic, dissolved	SW6020	0.002 mg/l	6 months	field-filtered into 1 L poly bottle, pH < 2 with HNO_3, ≤6°C
	Barium, dissolved		0.025 mg/l		
	Boron, dissolved		0.2 mg/l		
	Cadmium, dissolved		0.001 mg/l		
	Chromium, dissolved		0.005 mg/l		
	Copper, dissolved		0.025 mg/l		
	Lead, dissolved		0.005 mg/l		
	Selenium, dissolved		0.005 mg/l		
	Silver, dissolved		0.002 mg/l		
Major Cations	Calcium, dissolved	SW6010B	0.387 mg/l		
	Iron, dissolved		0.07 mg/l		
	Magnesium, dissolved		0.15 mg/l		
	Manganese, dissolved		0.005 mg/l		
	Potassium, dissolved		0.34 mg/l		
	Sodium, dissolved		0.4 mg/l		
Major Anions	Bromide	EPA 300.0	0.2 mg/l	28 days	1 L poly bottle, ≤6°C
	Chloride		0.5 mg/l		
	Sulfate		0.5 mg/l		
	Nitrite + Nitrate as N		0.061 mg/l		
	Fluoride	SM4500-F C	0.2 mg/l	28 days	
	Bicarbonate alkalinity	SM2320B	5 mg/l	14 days	
	Carbonate alkalinity		5 mg/l		
	Hydroxide alkalinity		5 mg/l		

Trace Metals & Major cations are non-filtered & non-preserved. Needs to be done @ the lab Thx.

Analyte Class	Analysis	Method	Reporting Limit	Holding Time	Bottle and Preservation
	Total alkalinity		5 mg/l

4a Express Package Service

Packages up to 150 lbs.

- [x] FedEx Priority Overnight — Next business morning.† Friday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
- [ ] FedEx Standard Overnight — Next business afternoon.* Saturday Delivery NOT available.
- [ ] FedEx First Overnight — Earliest next business morning delivery to select locations.* Saturday Delivery NOT available.
- [ ] FedEx 2Day — Second business day.* Thursday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
- [ ] FedEx Express Saver — Third business day.* Saturday Delivery NOT available.

FedEx Envelope rate not available. Minimum charge: One-pound rate.

* To most locations.

4b Express Freight Service

Packages over 150 lbs.

- [ ] FedEx 1Day Freight* — Next business day.** Friday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
- [ ] FedEx 2Day Freight — Second business day.** Thursday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
- [ ] FedEx 3Day Freight — Third business day.** Saturday Delivery NOT available.

* Call for Confirmation:

** To most locations.

5 Packaging

- [ ] FedEx Envelope*
- [ ] FedEx Pak* — Includes FedEx Small Pak, FedEx Large Pak, and FedEx Sturdy Pak.
- [ ] FedEx Box
- [ ] FedEx Tube
- [x] Other

* Declared value limit $500.

6 Special Handling

Include FedEx address in Section 3.

- [ ] SATURDAY Delivery — Not available for FedEx Standard Overnight, FedEx First Overnight, FedEx Express Saver, or FedEx 3Day Freight.
- [ ] HOLD Weekday at FedEx Location — Not available for FedEx First Overnight.
- [ ] HOLD Saturday at FedEx Location — Available ONLY for FedEx Priority Overnight and FedEx 2Day to select locations.

Does this shipment contain dangerous goods? One box must be checked.

- [x] No
- [ ] Yes — As per attached Shipper's Declaration.
- [ ] Yes — Shipper's Declaration not required.
- [ ] Dry Ice — Dry Ice, 9, UN 1845 ____ x ____ kg

Dangerous goods (including dry ice) cannot be shipped in FedEx packaging.

- [ ] Cargo Aircraft Only

7 Payment *Bill to:*

Enter FedEx Acct. No. or Credit Card No. below.

- [x] Sender — Acct. No. in Section 1 will be billed.

Paragon Analytics

INORGANICS CASE NARRATIVE

URS

Prather Phase 1 Investigation

Order Number - 0809141

1. This report consists of 1 water sample.
2. The sample was received cool and intact on 09/19/08.
3. The sample had been correctly preserved for the requested analyses with the exception of the sample for sulfide. The client directed Paragon to not add additional preservation to the sulfide bottle.
4. The sample was prepared for analysis based on Methods for the Chemical Analysis of Waters and Wastes (MCAWW), May 1994 procedures and Environmental Monitoring Systems Laboratory (EMSL) Rev 2.1 procedures.
5. The sample was analyzed following MCAWW and EMSL procedures for the following methods:

Analyte	Method	SOP #
Alkalinity	310.1	1106 Rev 6
Bicarbonate	310.1	1106 Rev 6
Carbonate	310.1	1106 Rev 6
Hydroxide	310.1	1106 Rev 6
Specific conductance	120.1	1128 Rev 9
Sulfide	376.1	1120 Rev 5
TDS	160.1	1101 Rev 10
Bromide	300.0	1113 Rev 11
Chloride	300.0	1113 Rev 11
Fluoride	300.0	1113 Rev 11
Nitrate as N	300.0	1113 Rev 11
Nitrite as N	300.0	1113 Rev 11
Sulfate	300.0	1113 Rev 11

6. All standards and solutions were used within their recommended shelf life.

7. The sample was prepared and analyzed within the established hold time for each analysis except the sample for nitrate as N and nitrite as N. The sample was received with little or no holding time remaining.

All in house quality control procedures were followed, as described below.

8. General quality control procedures.

   - A preparation (method) blank and laboratory control sample (LCS) were prepared and analyzed with the samples in each applicable preparation batch. There were not more than 20 samples in each preparation batch.
   - The method blank associated with each applicable batch was below the reporting limit for the requested analytes. This indicates that no contaminants were introduced to the samples during preparation and analysis.
   - The LCS was within the acceptance limits for each applicable analysis.
   - All initial and continuing calibration blanks (ICB/CCB) associated with each applicable analytical batch were below the reporting limit for the requested analytes.
   - All initial and continuing calibration verifications (ICV/CCV) associated with each applicable analytical batch were within the acceptance criteria for the requested analytes. This indicates a valid calibration and stable instrument conditions.

9. Matrix specific quality control procedures.

   Sample 0809141-1 was designated as the quality control sample for the specific conductance analysis. Per method requirements, matrix QC was performed for the remaining analyses. Since a sample from this order number was not the selected quality control (QC) sample, matrix specific QC results are not included in this report.

   Similarity of matrix and therefore relevance of the QC results should not be automatically inferred for any sample other than the native sample selected for QC.

   - A sample duplicate was prepared and analyzed with the specific conductance batch. All guidance criteria for precision were met.

10. Reduced aliquots were taken of the sample for the alkalinity, bicarbonate, carbonate, and hydroxide analysis. Reporting limits were elevated accordingly.

11. Manual integrations are performed when needed to provide consistent and defensible data following the guidelines in Paragon Analytics Standard Operating Procedure 939 Revision 3. Whenever manual integrations are performed, before and after chromatograms of the peak that were manually integrated are included in the report along with the reason why the re-integration was necessary.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Inorganic Data Reporting Qualifiers

The following qualifiers are used by the laboratory when reporting results of inorganic analyses.

- Concentration qualifier -- If the analyte was analyzed for but not detected a “U” is entered.

- QC qualifier -- Specified entries and their meanings are as follows:

  N - Spiked sample recovery not within control limits.

  * - Duplicate analysis (relative percent difference) not within control limits.

  Z - Calibration spike recovery not within control limits.

4a Express Package Service

Packages up to 150 lbs.

- [X] FedEx Priority Overnight — Next business morning.† Friday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
- [ ] FedEx Standard Overnight — Next business afternoon.* Saturday Delivery NOT available.
- [ ] FedEx First Overnight — Earliest next business morning delivery to select locations.* Saturday Delivery NOT available.
- [ ] FedEx 2Day — Second business day.* Thursday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
- [ ] FedEx Express Saver — Third business day.* Saturday Delivery NOT available.

FedEx Envelope rate not available. Minimum charge: One-pound rate.

* To most locations.

4b Express Freight Service

Packages over 150 lbs.

- [ ] FedEx 1Day Freight* — Next business day.** Friday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
- [ ] FedEx 2Day Freight — Second business day.** Thursday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
- [ ] FedEx 3Day Freight — Third business day.** Saturday Delivery NOT available.

* Call for Confirmation:

** To most locations.

5 Packaging

- [ ] FedEx Envelope*
- [ ] FedEx Pak* — Includes FedEx Small Pak, FedEx Large Pak, and FedEx Sturdy Pak.
- [ ] FedEx Box
- [ ] FedEx Tube

8. Component:Nitrate/Nitrite as N
Standard:External Fit Type:
Origin:Ignore Calibration:Area

(No Levels Component)

Method Information : Select Module(s)

System Name : DX120
System Number : 1
Method Type : Ion Chromatography
Column : AS14 4-MM
Analyst : SJL
Comment : Flow rate = 1.2 mL/min,
Eluent = 3.5mM Na2CO3 / 1.0 mM NaHCO3

DX-120 Timed Events

Module Name :
Module Serial Number :
System Mode : Column
Column : A
Pump : On
SRS / Cell : On
Eluent Pressure : On
Pressure Unit : psi
TTL 1 Label : TTL 1
TTL 2 Label : TTL 2
Comment :

Time	Offset	Valve	TTL1	TTL2	AC	Collect
Init	*	Load	Low	Low	Off	
0.00		Load	Low	Low	Off	Begin
0.01		Inject	Low	Low	Off	
0.40		Load	Low	Low	Off	
10.80		Load	High	Low	Off	
10.90		Load	Low	Low	Off	

DX-120 Detector Parameters

Detector Type : DX-120
Data collection time (minutes) : 13.00
Data Collection Rate : 5.00
Real time plot scale maximum (μS) : 40.000
Real time plot scale minimum (μS) : -3.000

DX-120 Integration Parameters

Peak detection algorithm : Standard
Starting peak width (seconds) : 8.00
Peak threshold : 0.50
Peak area reject (area counts) : 800.00
Reference peak area reject (area counts) : 800.00

DX-120 Smoothing Parameters

Filter Type : No filter

DX-120 Report Data

Report Format File : C:\PeakNet\method\Default2.rpt
Print Sample Analysis : Yes
Print Calibration Update : Yes
Print Check Standard : No
System Suitability Tests :
No system suitability tests selected.

DX-120 Integration Data Events

Time	Description
0.00	Stop peak detection
0.05	Force baseline at start of all peaks
1.90	Start peak detection
2.20	Void volume treatment for this peak
3.00	Void volume treatment for this peak

DX-120 Calibration Parameters

External or internal calibration : EXTERNAL
Number of replicates for calibration : 1
Rejection : Manual
Level Weighting : Equal
Calibration standard volume : 1.00
Default sample volume : 1.00
Amount units : ug/L
Replace retention time : Yes
Update response : Yes
Default dilution factor : 1.00
Default response factor for unknown peaks : 0.00
Calculate unknowns by area or height : Area

DX-120 Component Identification Table

Component	Retention	Tolerance	Reference
Fluoride	3.12 min	5.00 %	
Chloride	4.25 min	5.00 %	
Nitrite as N	5.04 min	4.90 %	
Bromide	6.25 min	7.30 %	
Nitrate as N	7.23 min	10.00 %	
Orthophosphate as P	8.92 min	4.10 %	
Sulfate	10.47 min	4.10 %	
Nitrate/Nitrite as N	20.00 min	5.00 %	

DX-120 Component Quantitation Table

Component	Retention	Low Limit	High Limit
Fluoride	3.12 min	100	10000
Chloride	4.25 min	200	20000
Nitrite as N	5.04 min	100	10000
Bromide	6.25 min	200	20000
Nitrate as N	7.23 min	200	20000
Orthophosphate as P	8.92 min	300	20000
Sulfate	10.47 min	500	100000
Nitrate/Nitrite as N	20.00 min	0	0

DX-120 Component Calibration Table

Component	Retention Time	Curve Fit	Origin	Cal. by	Response Component	Relative Factor
Fluoride	3.12 min	Quadratic	Ignore	Area		0.00
Chloride	4.25 min	Quadratic	Ignore	Area		0.00
Nitrite as N	5.04 min	Quadratic	Ignore	Area		0.00
Bromide	6.25 min	Quadratic	Ignore	Area		0.00
Nitrate as N	7.23 min	Quadratic	Ignore	Area		0.00
Orthophosphate as P	8.92 min	Quadratic	Ignore	Area		0.00
Sulfate	10.47 min	Quadratic	Ignore	Area		0.00
Nitrate/Nitrite as N	20.00 min	—	Ignore	Area	Fluoride	0.00

DX-120 Component = Fluoride Levels Table

Retention Time : 3.12 min
Amount units : ug/L
Replicate unit type : Area
Number of levels : 6
Number of replicates : 1

METALS CASE NARRATIVE

URS

Prather Phase 1 Investigation

Order Number - 0809141

1. This report consists of 1 water sample.
2. The sample was received cool and intact on 09/19/08.
3. The sample was to be analyzed for dissolved metals. The sample was filtered through a 0.45 micron filter and preserved with nitric acid to a pH less than two prior to analysis.
4. The sample was prepared for analysis based on SW-846, 3rd Edition procedures.

   For analysis by Trace ICP and ICP-MS, the sample was prepared following methods 6010B and 6020A and PA SOP 806 Rev. 13. The sample was not digested prior to analysis.

   The sample was prepared for ICP-MS analysis of arsenic and selenium by passing the sample and associated QC through a cation exchange column. The cation exchange column removes cations from the matrix and eliminates the CaCl+ (mass 75) interferences.
5. The sample was analyzed following SW-846, 3rd Edition procedures.

   Analysis by Trace ICP followed method 6010B and PA SOP 834 Rev. 7.

   The relationship between intensity and concentration for each element is established using at least four standards, one of which is a blank solution.

   During sample analysis concentrations are computed by the software and the results are printed in mg/L. The instrument software does not provide a printout which gives both intensity and concentration. The validity of the calibration equation is tested by analyzing the following solutions: a blank, a low level check solution with concentrations near the reporting limit, an Initial Calibration Verification (ICV) standard from a 2nd source standard solution with concentrations near the middle of the analytical range, a Continuing Calibration Verification (CCV) standard with concentrations at two times those in the ICV, and a readback of the highest calibration standard.

These solutions provide verification that the calibration equations are functioning properly throughout the analytical range of the instrument. During sample analysis dilutions are made for analytes found at concentrations above the highest calibration standard. No results are taken from extrapolations beyond the highest standard.

Analysis by ICP-MS followed method 6020A and PA SOP 827 Rev. 6.

The relationship between intensity and concentration for each element is established using at least four standards, one of which is a blank solution. A calibration equation relating instrument response to concentration is developed by the instrument software. The equation is a higher order polynomial. This type of equation is used to improve quantitation accuracy at lower concentrations where the relationship between concentration and instrument response is non-linear.

During sample analysis concentrations are computed by the software and the results are printed in ug/L. The validity of the calibration equation is tested by analyzing the following solutions: a blank, a low level check solution with concentrations near the reporting limit, an Initial Calibration Verification (ICV) standard from a 2nd source standard solution with concentrations near the middle of the analytical range, a Continuing Calibration Verification (CCV) standard with concentrations near the middle of the analytical range but different than those in the ICV, and a readback of the highest calibration standard.

These solutions provide verification that the calibration equations are functioning properly throughout the analytical range of the instrument. During sample analysis dilutions are made for analytes found at concentrations above the highest calibration standard. No results are taken from extrapolations beyond the highest standard.

6. All standards and solutions are NIST traceable and were used within their recommended shelf life.
7. The sample was prepared and analyzed within the established hold times.

All in house quality control procedures were followed, as described below.

8. General quality control procedures.
   - A filter (method) blank was filtered and preserved at the same time as the samples. A laboratory control sample was also prepared with the samples in the arsenic and selenium batch. There were not more than 20 samples associated with each filtered blank.
   - The preparation (method) blank associated with each batch was below the practical quantitation limit for each requested analyte.
   - The laboratory control sample associated with the arsenic and selenium batch was within the acceptance limits.

- All initial and continuing calibration blanks associated with each analytical batch were below the practical quantitation limits for the requested analytes.
- All initial and continuing calibration verifications associated with each analytical batch were within the acceptance criteria for the requested analytes. This indicates a valid calibration and stable instrument conditions.
- The high standard readbacks associated with Method 6010B and 6020A analyses were within acceptance criteria.
- The interference check samples associated with Method 6010B were within acceptance criteria.
- The interference check samples associated with Method 6020A were analyzed.

9. Matrix specific quality control procedures.

   Sample 0809141-1 was designated as the quality control sample for each analysis.

   Similarity of matrix and therefore relevance of the QC results should not be automatically inferred for any sample other than the native sample selected for QC.

   - A matrix spike and matrix spike duplicate were analyzed with each batch. All acceptance criteria for accuracy were met with the following exceptions:

Analyte	Sample ID
Boron	0808141-1MS & MSD
Calcium	0808141-1MSD
Magnesium	0808141-1MS & MSD
Potassium	0808141-1MS & MSD
Sodium	0808141-1MS & MSD

     The native sample results are flagged for matrix spike failure.

   - A matrix spike duplicate was analyzed with each batch. All acceptance criteria for precision were met.
   - A serial dilution was analyzed with each batch. All acceptance criteria were met with the following exceptions:

Analyte	Sample ID
Potassium	0809141-1L
Sodium	0809141-1L

     The native sample results are flagged for serial dilution failure.

10. It is a standard PA practice that samples for ICP-MS are analyzed at a dilution.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Inorganic Data Reporting Qualifiers

The following qualifiers are used by the laboratory when reporting results of inorganic analyses.

- Result qualifier -- A "B" is entered if the reported value was obtained from a reading that was less than the Practical Quantitation Limit but greater than or equal to the Method Detection Limit (MDL). If the analyte was analyzed for but not detected a "U" is entered.

- QC qualifier -- Specified entries and their meanings are as follows:

  E - The reported value is estimated because of the presence of interference. An explanatory note may be included in the narrative.

  M - Duplicate injection precision was not met.

  N - Spiked sample recovery not within control limits. A post spike is analyzed for all ICP analyses when the matrix spike and or spike duplicate fail and the native sample concentration is less than four times the spike added concentration.

  Z - Spiked recovery not within control limits. An explanatory note may be included in the narrative.

  * - Duplicate analysis (relative percent difference) not within control limits.

  S - SAR value is estimated as one or more analytes used in the calculation were not detected above the detection limit.

Table 2 - Aqueous Sample Collection, Handling, and Analysis Summary

Analyte Class	Analysis	Method	Reporting Limit	Holding Time	Bottle and Preservation
Organics	Volatile Organics (including BTEX)	SW8260M extended	Varies by analyte	14 days	3 x 40 ml glass vial, pH < 2 with HCl, ≤6°C
	Methane	RSK-175	1.0 mg/l	7 days	3 x 40 ml glass vial. ≤6°C
Trace and Other Metals	Arsenic, dissolved	SW6020	0.002 mg/l	6 months	field-filtered into 1 L poly bottle, pH < 2 with HNO_3, ≤6°C
	Barium, dissolved		0.025 mg/l		
	Boron, dissolved		0.2 mg/l		
	Cadmium, dissolved		0.001 mg/l		
	Chromium, dissolved		0.005 mg/l		
	Copper, dissolved		0.025 mg/l		
	Lead, dissolved		0.005 mg/l		
	Selenium, dissolved		0.005 mg/l		
	Silver, dissolved		0.002 mg/l		
Major Cations	Calcium, dissolved	SW6010B	0.387 mg/l		
	Iron, dissolved		0.07 mg/l		
	Magnesium, dissolved		0.15 mg/l		
	Manganese, dissolved		0.005 mg/l		
	Potassium, dissolved		0.34 mg/l		
	Sodium, dissolved		0.4 mg/l		
Major Anions	Bromide	EPA 300.0	0.2 mg/l	28 days	1 L poly bottle, ≤6°C
	Chloride		0.5 mg/l		
	Sulfate		0.5 mg/l		
	Nitrite + Nitrate as N		0.061 mg/l		
	Fluoride	SM4500-F C	0.2 mg/l	28 days	
	Bicarbonate alkalinity	SM2320B	5 mg/l	14 days	
	Carbonate alkalinity		5 mg/l		
	Hydroxide alkalinity		5 mg/l		

Trace Metals & Major cations are non-filtered & non-preserved. Needs to be done @ the lab Thx.

Analyte Class	Analysis	Method	Reporting Limit	Holding Time	Bottle and Preservation
	Total alkalinity		5 mg/l		
	Total Dissolved Solids (TDS)	EPA 160.1	10 mg/l	7 days	
	Sulfide	SM4500-S C/F	0.5 mg/l	7 days	5 ml of 10N Zinc acetate, pH > 9 with NaOH ≤6°C
Other Parameters	Conductivity	SM2510B	1 mmhos/cm	48 hours	≤6°C
	Cation/Anion Charge Balance	SM1030F (calculation)	NA	NA	NA

CONDITION OF SAMPLE UPON RECEIPT FORM **Paragon Analytics**

Client: URS Workorder No: 0809141

Project Manager: DF Initials: CT Date: 9-19-08

1.	Does this project require any **special handling** in addition to standard Paragon procedures?		YES	(NO)
2.	Are custody **seals** on **shipping containers** intact?	NONE	(YES)	NO
3.	Are Custody seals on **sample containers** intact?	(NONE)	YES	NO
4.	Is there a **COC (Chain-of-Custody) present** or other representative documents?		(YES)	NO
5.	Are the **COC and bottle labels complete and legible**?		(YES)	NO
6.	Is the **COC in agreement** with samples received? (IDs, dates, times, no. of samples, no. of containers, matrix, requested analyses, etc.)		(YES)	NO
7.	Were **airbills / shipping documents** present and/or removable?	DROP OFF	(YES)	NO
8.	Are all aqueous **samples requiring preservation preserved correctly?** (excluding volatiles)	N/A	YES	(NO)
9.	Are all aqueous **non-preserved samples pH 4-9**?	N/A	(YES)	NO
10.	Is there **sufficient sample** for the requested analyses?		(YES)	NO
11.	Were all samples placed in the **proper containers** for the requested analyses?		(YES)	NO
12.	Are all samples within **holding times** for the requested analyses?		(YES)	NO
13.	Were all sample containers received **intact**? (not broken or leaking, etc.)		(YES)	NO
14.	Are all samples requiring **no** headspace (**VOC, GRO, RSK/MEE, Rx CN/S, radon**) headspace free? **Size of bubble**: ✓ < green pea ____ > green pea	N/A	YES	(NO)
15.	Do perchlorate LCMS-MS samples **have** headspace? (at least 1/3 of container required)	(N/A)	YES	NO
16.	Were samples checked for and free from the presence of **residual chlorine?** (Applicable when PM has indicated samples are from a chlorinated water source; note if field preservation with sodium thiosulfate was not observed.)	(N/A)	YES	NO
17.	Were the samples **shipped on ice**?		(YES)	NO
18.	Were cooler temperatures measured at 0.1-6.0°C? **IR gun used*: #2 (#4)**	RAD ONLY	(YES)	NO

Cooler #:	1							
Temperature (°C):	4.0							
No. of custody seals on cooler:	1							
DOT Survey/ Acceptance Information — External µR/hr reading:	14							
Background µR/hr reading:	12							

Were external µR/hr readings ≤ two times background and within DOT acceptance criteria? (YES) / NO / NA (If no, see Form 008.)

Additional Information: PROVIDE DETAILS BELOW FOR A NO RESPONSE TO ANY QUESTION ABOVE, EXCEPT #1 AND #16.

0809141-3-1 - Headspace

Sulfide bottle was at pH 7 - NO further preservation performed as directed by URS-

If applicable, was the client contacted? **YES / NO / NA** Contact: _____ Date/Time: _____

4a Express Package Service

Packages up to 150 lbs.

- [X] FedEx Priority Overnight — Next business morning.* Friday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
- [ ] FedEx Standard Overnight — Next business afternoon.* Saturday Delivery NOT available.
- [ ] FedEx First Overnight — Earliest next business morning delivery to select locations.* Saturday Delivery NOT available.
- [ ] FedEx 2Day — Second business day.* Thursday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
- [ ] FedEx Express Saver — Third business day.* Saturday Delivery NOT available.

FedEx Envelope rate not available. Minimum charge: One-pound rate.

* To most locations.

4b Express Freight Service

Packages over 150 lbs.

- [ ] FedEx 1Day Freight* — Next business day.** Friday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
- [ ] FedEx 2Day Freight — Second business day.** Thursday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
- [ ] FedEx 3Day Freight — Third business day.** Saturday Delivery NOT available.

* Call for Confirmation:

** To most locations.

5 Packaging

- [ ] FedEx Envelope†
- [ ] FedEx Pak* — Includes FedEx Small Pak, FedEx Large Pak, and FedEx Sturdy Pak.
- [ ] FedEx Box
- [ ] FedEx Tube
- [X] Other

* Declared value limit $500.

6 Special Handling

Include FedEx address in Section 3.

- [ ] SATURDAY Delivery — Not available for FedEx Standard Overnight, FedEx First Overnight, FedEx Express Saver, or FedEx 3Day Freight.
- [ ] HOLD Weekday at FedEx Location — Not available for FedEx First Overnight.
- [ ] HOLD Saturday at FedEx Location — Available ONLY for FedEx Priority Overnight and FedEx 2Day to select locations.

Does this shipment contain dangerous goods? One box must be checked.

- [X] No
- [ ] Yes — As per attached Shipper's Declaration.
- [ ] Yes — Shipper's Declaration not required.
- [ ] Dry Ice — Dry Ice, 9, UN 1845 ____ x ____ kg

Dangerous goods (including dry ice) cannot be shipped in FedEx packaging.

- [ ] Cargo Aircraft Only

ICPMS Metals

Method SW6020
Calibration Blanks

Lab Name: **Paragon Analytics**
Work Order Number: 0809141
Client Name: URS
ClientProject ID: Prather Phase 1 Investigation

Lab ID: CCB3
QC Type: Continuing Calibration

Run ID: IM080923-1A3
Date Analyzed: 09/23/2008
Time Analyzed: 1:58:00 PM
Result Units: MG/L

CASNO	Target Analyte	Result	Reporting Limit	Result Qualifier
7440-38-2	ARSENIC	0.000126	0.0002	B
7440-43-9	CADMIUM	0.00003	0.00003	U

Raw Data

HEADER INFROMATION FOR ANALYTICAL SEQUENCE 080922A

STANDARD SOLUTION CODES

Stock A (ST080626-1) Exp. 1-23-09

Element	ug/ml
Al, Ca, Mg	1000
Na, K	500
Fe	400
Li	10

Standard	Dilution	Procedure
A1	1/2 of Stock A	5ml of Stock A to 10ml final volume.
A2	1/10 of A1	1ml of Standard A1 up to a 10ml final volume.
A3	1/10 of A2	1ml of Standard A2 up to a 10ml final volume.

Stock B (ST080626-2) Exp. 12-31-08

Element	ug/ml
P, Si	100
B, Ba, Cr, Cu, Mn, Mo, Ni, Pb, Sn, Sr, Ti ,Zn	20
As, Cd, Co, Se, Tl, V	10
Ag, Sb	4
Be	2

Stock Ag- 1000 ug/ml (ST071101-9) Exp. 1-23-09
Stock Th – 1000 ug/ml (ST071101-10) Exp. 1-23-09

The following dilutions of Stock Ag and Stock Th are made to provide the daily calibration Standards.

Standard	Dilution	Procedure
B1	1/2 of Stock B 1/500 Ag and 1/500 Th	5ml of Stock B and 0.02ml of Stock Ag and Stock Th up to a 10ml final volume.
B2	1/10 of B1	1.0ml of Standard B1 up to a 10ml final volume.
B3	1/10 of B2	1.0ml of Standard B2 up to a 10ml final volume.

Stock C (ST0080626-3) Exp. 1-23-09

Element	ug/ml
S, U	100
Bi, Zr	10

Standard	Dilution	Procedure
C1	1/2 of Stock C	5ml of Stock C up to a 10ml final volume.
C2	1/10 of C1	1.0ml of Standard C1 up to a 10ml final volume.
C3	1/10 of C2	1.0ml of Standard C2 up to a 10ml final volume.

RL STD (Reporting Limit Standard) Intermediate.
(ST071101-8) Exp. 12-31-2008

Element	ug/ml
K, Na	500
Ca, Mg	200
Al, U	100
B, Fe, P, S, Si	50
Li, Mo, Sn, Sr, Ti	10
Sb	8
Ni, As, Bi, Se, Th, Tl, Zn, Zr	5
Pb	3
Ag, Ba, Co, Cr, Cu, Mn, V	2
Be, Cd	1

RL STD (working standard) made daily by diluting the intermediate above 1000 fold. This working standard had concentration levels at the normal Paragon reporting limits for all elements except Ca, Mg and Na, K which are at 0.2ppm and 0.5ppm, this is below the normal Paragon reporting limit.

Blank Solution

Double D.I. water, 3% HNO_3 and 5%HCl
Used for Std. Blank, ICB and CCB

CCV (ST080813-1) Exp. 1-10-10

Element	ug/ml
Al, Ca, Mg, K, Na	50
Fe	20
U, P, S, Si	5
B, Ba, Cr, Cu, Mn, Mo, Ni, Pb, Se, Sn, Zn, Zr	1
As, Be, Bi, Cd, Co, Li, Sb, Sr, Ti, Tl, V	0.5
Ag, Th	0.2

ICV (ST080813-1) Exp. 1-10-10
Prepared daily by diluting the CCV (described above) ½.
The 1/2 dilution is made by diluting 5ml of the CCV to a 10ml final volume.
The resulting concentrations are:

Element	ug/ml
Al, Ca, Mg, K, Na	25
Fe	10
U, P, S, Si	2.5
B, Ba, Cr, Cu, Mn, Mo, Ni, Pb, Se, Sn, Zn, Zr	0.5
As, Be, Bi, Cd, Co, Li, Sb, Sr, Ti, Tl, V	0.25
Ag, Th	0.1

CRI (ST080813-6) Exp. 1-10-10
Made By diluting
1.0ml of CRI Stock (ST080813-2) Exp. 1-10-10
to a 100ml final volume.

Element	ug/ml
Ca, Mg, K, Na	5.0
Al, Ba	0.4
B, Fe, U, P, S,V	0.2
Sb	0.12
Co, Si,, Sn	0.1
Ni	0.08
Cu, Bi, Zr	0.05
Zn	0.04
Mn	0.03
Ag, Cr, Li, Mo, Sr, Ti, Tl	0.02
Be, Cd, As, Se, Th, Pb	0.01

ICSA (ST080813-3) Exp. 9-13-09

Element	ug/ml
Ca, Mg, Al	250
Fe	100

ICSAB (ST080813-4) Exp. 1-23-09

Element	ug/ml
Ca, Mg, Al	250
Fe	100
U	10
B, Si, Li, Mo, Sn, Sr, Ti, Cd, Zn, Ni, Ag, P, S	1.0
Sb	0.6
Ba, Be, Co, V, Cr, Cu, Mn, Bi, Zr	0.5
Ag	0.2
As, Tl	0.1
Se, Pb, Th	0.05

Pipette ID Numbers

1.0ml to 5.0ml --- M-55
0.1ml to 1.0ml --- M-61
0.01ml to 0.1ml --- M-57

Acid Lot Numbers

HCl – G05039
HNO_3 – G04026

Inter Element Correction Information

The following table summarizes spectral interferences that have been identified and for which IEC's are used. If a sample contains a concentration of an interfering element that exceeds the upper analytical range, and an affected element is being determined, it is necessary to dilute the sample to bring the interfering element into analytical range.

Interfering Element (ug/ml)	Affected Element
Al (500)	Se, Pb
Mg (500)	Th, Zn
Fe (200)	Se, Tl, V, Pb, U
Si (50)	Zr
U (50)	Al, Cr, Cu, Bi, Pb, Mg, Se, Ag, Tl, Si
Ba (10)	Co
Cr (10)	Sb
Cu (10)	Bi
Mn (10)	Tl, Se
Mo (10)	Al, Si, Pb,, Sb
Ti (10)	Co, Bi, Si, Sn, Tl, Pb, Zr
As (5)	Cd
V (5)	Al, Be, Tl
Zr (5)	Ag

The following table lists element concentrations (ug/ml) that no significant spectral interferences have been observed.

Element	Concentration	Element	Concentration	Element	Concentration
K	500	Se	10		
Na	500	Pb	10	Li	5
Ca	500	Zn	10	Cd	5
P	50	Sr	10	Co	5
S	50	Sn	10	Ag	2
Ni	10	Bi	5	Sb	2
B	10	Tl	5	Be	1

2X – Dilution made by diluting 2.5ml of sample up to a 5ml final volume.
3X - Dilution made by diluting 2.0ml of sample up to a 6ml final volume.
4X - Dilution made by diluting 2.0ml of sample up to a 8ml final volume.
5X - Dilution made by diluting 1.0ml of sample to a 5ml final volume.
10X - Dilution made by diluting 0.5ml of sample to a 5ml final volume.
20X – Dilution made by diluting 0.25ml of sample to a 5ml final volume.
25X – Dilution made by diluting 0.2ml of sample to a 5ml final volume.
50X – Dilution made by diluting 0.1ml of sample to a 5ml final volume.
100X – Dilution made by diluting 0.05ml of sample to a 5ml final volume.
500X – Dilution made by diluting 0.02ml of sample to a 10ml final volume.
1000X – Dilution made by diluting a 10X dilution 100X.

Analytical Spikes

0809020-21 – Post spiked for Ca at 80ppm by diluting 0.2ml of Cation spike(ST080818-5) up to a 5ml final volume with sample digestate.

0808229-4 – Post spiked for Pb at 1ppm by diluting 0.2ml of Z spike(ST080818-4) up to a 5ml final volume with sample digestate.

0808229-13 – Post spiked for Na, K at 80ppm and Cr at 0.4ppm by diluting 0.2ml of Cation spike (ST080818-5) and 0.2ml of Z spike(ST080818-4) up to a 5ml final volume with sample digestate.

0808250-7 – Post spiked for all elements at Paragon standard by diluting 0.1ml of Cation spike (ST080818-5) and 0.1ml of Z spike(ST080818-4) up to a 5ml final volume with sample digestate.

0809034-1 – Post spiked for Ca at 80ppm and Sb at 1ppm by diluting 0.2ml of Cation spike (ST080818-5) and 0.2ml of Z spike(ST080818-4) up to a 5ml final volume with sample digestate.

0809099-1MS/MSD – Spiked for Mn at 0.5ppm by diluting 0.1ml of Z spike(ST080818-4) up to a 5ml final volume with sample.

0809099-21MS/MSD – Spiked for Mn at 0.5ppm by diluting 0.1ml of Z spike(ST080818-4) up to a 5ml final volume with sample.

Comments

1. Please see run log and work orders for elements of interest.

Daily Maintenance

1. Check/ Change Peristaltic pump tubing.
2. Check the torch for deposits, clean if necessary.
3. Check/ Empty drain water.

Daily Maintenance done by _____RF_____.

Monthly Maintenance

1. Check/Clean nebulizer and spray chamber.
2. Clean air filters
3. Check/Clean entrance slit.
4. Fill water recirculating reservoir.

Monthly maintenance done by: RF 9-2-08.

Major problems / adjustments / repairs recorded in the ICP Maintenance Log (3716).
