> We set CIBPs with 2 sks at 7048' and at 6742', tested casing good to 1000 psi and ran the attached log. We cut the casing at 2500' but are unable to stretch casing deeper than 1000'. With permission we would like to use the cut at 2500' as the bottom holes, shoot squeeze holes at 2300' and set a retainer at 2315'. We will than squeeze 100 sks leaving 10 sks of the 100 sks on top of the retainer. We will this shoot lower squeeze holes at 1710', upper holes at 1510', set a retainer at 1525' and squeeze with 100 sks leaving 10 sks of the 100 sks on top of the retainer. We will then cut and pull casing from 1000', pump our stub/surface plug as one from 1050' to surface.
