5. DESCRIBE PROPOSED OR COMPLETED OPERATIONS

Operator seeks exception to the part of COGCC Rule 317i that states that cement placed behind production casing must achieve at least 300 psi compressive strength after 24 hours and at least 800 psi compressive strength after 72 hours, when tested at 95 degF and 800 psi. The cement slurry design stated in the drilling plan for all slurries is capable of achieving the 300 psi / 24 hours and 800 psi / 72 hours requirements under bottomhole temperature conditions. High-temperature-capable retarders used in the slurry design prevent the cement from achieving compressive strength in 72 hours at the lower 95 degF test temperature required by the Rule. All proposed cement designs comply with the subject rule when downhole temperature is taken into effect.

Exxon Mobil Corporation is unable to comply with the compressive strength specifications of COGCC Rule 317.i., and the requested variance will not violate the basic intent of the Oil and Gas Conservation Act.
