### 15. Comments:

This location assessment is for the construction of the new RWF 34-31 well pad. There will be a total of 14 wells drilled. Surface and minerals are owned in fee. The location reference point for this pad is the RWF 33-31 well from which all measurements were taken. Reference photos will be provided at a later date after snow melt. Williams will employ the following BMP's to support protection of surface and ground water: 1) Williams will ensure 110% secondary containment for fluids contained at well site during drilling and completion operations. 2) Williams will implement best management practices to contain any unintentional release of fluids. 3) A closed loop mud system will be used.

I hereby certify that the statements made in this form are, to the best of my knowledge, true, correct and complete.

**All representations, stipulations and conditions of approval stated in this Form 2A for this location shall constitute representations, stipulations and conditions of approval for any and all subsequent operations on the location unless this Form 2A is modified by Sundry Notice, Form 4 or an Amended Form 2A.**

Operator must ensure 110 percent secondary containment for any volume of fluids contained at well site during drilling and completion operations. If fluids are conveyed via pipeline, operator must implement best management practices to contain any unintentional release of fluids.

Reserve pit (or any pit containing fluids, if constructed) must be lined or closed loop system must be implemented during drilling.

The moisture content of any drill cuttings in a cuttings pit, trench, or pile shall be as low as practicable to prevent accumulation of liquids greater than de minimis amounts. At the time of closure, the drill cuttings must also meet the applicable standards of table 910-1.
