**RE: Soil Investigation Results
Lincoln Trust/Pruski #3-22
La Plata County, Colorado**

Dear Mr. Montoya:

LT Environmental, Inc. (LTE) is pleased to provide XTO Energy (XTO) with this letter summarizing the results of soil investigation activities conducted at the Lincoln Trust/Pruski #3-22 (Site) on August 16, 2010 (Figure 1). LTE conducted the investigation at the request of XTO as part of the closure of a former pit used as secondary containment for a produced water tank. The pit was removed as part of tank battery upgrade activities.

SOIL SAMPLING

On August 16, 2010, LTE collected two soil samples at the Site. A composite soil sample of the pit (labeled "Lincoln Trust Pruski #3-22") was collected from the earthen floor and walls of the pit at a depth of approximately 6 feet below ground surface (bgs). The depth of the pit floor was approximately 6 feet bgs. One background sample (labeled "Lincoln Trust Pruski #3-22 BG") was collected immediately off the well pad. The sample locations are shown on Figure 2.

The soil samples were placed in clean Teflon-lined glass jars and Ziploc bags and stored in a cooler with ice in the field. The samples were submitted to Oxidor Laboratories (Oxidor) of Plano, Texas. The pit soil sample was submitted for the analysis of Electrical Conductivity (EC), Sodium Absorption Ratio (SAR), pH, and Total Metals (arsenic, barium, cadmium, chromium, copper, lead, mercury, nickel, selenium, silver, and zinc) in soils. The metals analysis was performed using EPA Method 610B with the exception of mercury, which was analyzed by the EPA Method 7471A. The background sample was analyzed for arsenic only.

RESULTS

Tables 1 and 2 present the soil analytical results and the complete laboratory analytical report is included as Attachment 1. Analytical results indicate that metals concentrations in the pit sample do not exceed the Colorado Oil and Gas Conservation Commission (COGCC) Table 910-1 Concentration Levels, with the exception of arsenic. Arsenic was detected in the pit sample at a concentration of 2.41 milligrams per kilogram (mg/kg). Arsenic was detected in the background sample at a similar concentration of 3.15 mg/kg. Analytical results for pH, EC, and SAR indicate that the values measured in the pit sample do not exceed the COGCC Table 910-1 levels.

CONCLUSIONS

Soil sample analytical results indicate there are no impacts above the regulatory levels listed in COGCC Table 910-1, except for arsenic concentrations. However, elevated arsenic levels are ubiquitous in Colorado and generally exceed the COGCC Table 910-1 levels by 1 to 3 orders of magnitude. A background sample collected at the site contains an arsenic concentration of 3.15 mg/kg compared to the pit sample result of 2.41 mg/kg. Since the arsenic concentrations in the pit sample are below concentrations detected in the background sample, LTE recommends that XTO request a variance from the COGCC that allows the pit to be closed with the existing soil concentrations in place.

LTE appreciates the opportunity to provide environmental services to XTO. If you have any questions regarding this report, please contact us at (970) 385-1096.

Sincerely,

LT ENVIRONMENTAL, INC.

Case Narrative

Project Name: **XTO CO Soil**

D-1	Elevated reporting limit(s) due to dilution. Dilution resulted from sample matrix interference, high target analyte(s), high non-target analyte(s) or a combination thereof.
E-1	Not covered under scope of NELAC accreditation.
ppm	Parts per million = mg/Kg or mg/L
ppb	Parts per billion = ug/Kg or ug/L
MQL	Method quantitation limit
SDL	Sample detection limit (reflects any laboratory adjustments made to the sample during analysis such as dry weight or dilutions)
SQL	Sample quantitation limit (reflects any laboratory adjustments made to the sample during analysis such as dry weight or dilution)
ND	Analyte not detected at or above SQL
LCS/LCSD	Laboratory control spike / Laboratory control spike duplicate
MS/MSD	Matrix spike / Matrix spike duplicate
RPD	Relative percent difference
Sub	Analysis performed by subcontract laboratory

Solid sample results reported on a dry weight basis for all applicable analysis, unless otherwise noted. Dry weight calculations based upon % solids obtained as outlined in EPA method 5035 section 7.5

Metals CCV percent deviation of Sodium for QC Batch ID META_02413_L was slightly outside Oxidor QC limits.

This report is intended only for the use of LT Environmental and may contain information that is privileged and confidential. It may not be reproduced in full (or in part) without the expressed written permission of LT Environmental and Oxidor Laboratories, LLC.

Oxidor Laboratories, LLC certifies to the best of its knowledge that all results contained in this report are consistent with the National Environmental Laboratory Accreditation Program, except where otherwise noted.
