

**ADDENDUM TO:**

**WILLIAMS PRODUCTION RMT COMPANY  
NORTH LOGAN WASH  
NOTICE OF COMPLETION REPORT FOR  
REMEDATION #4964**

This Addendum is issued to modify, explain or clarify the original Notice of Completion Report for Remediation #4964.

As discussed in the original completion report, solidified cuttings from both the production and the reserve pits on the North Logan Wash (NLW) 31-8-797 (aka NLW 8-21D) well pad were combined and mixed with clean soil. As required by the Colorado Oil and Gas Conservation Commission (COGCC), the upper three (3) feet of pit backfill were reserved for native soil. Analytical results from the final backfill material are provided as an attachment to this addendum.

Reclamation procedures were performed as described in the Pit Closure Work Plan submitted to the COGCC as part of the Form 27 on December 11, 2009. Following removal of the solidified pit contents from the production and reserve pits on the well pad, the cuttings were mixed with clean fill. In order to satisfy the COGCC Rules 1000-Series requirements for interim reclamation of areas no longer in use, the clean fill was taken from the areas of the pad that are no longer required for production operations. As the fill was removed from the areas no longer in use, the locations were roughly graded to original contour. Upon completion of the mixing operations, the pits were backfilled with the mixed material to within three (3) feet of the final elevation. Even though the pits were identified as being located on non-crop land, the upper three (3) feet of the pits was backfilled with clean native soil. The backfilling of the pits was completed such that the soils were returned to their original relative positions. The pits were then graded to be level with the surrounding pad area.

As required by the COGCC Rules 1000-Series, those areas no longer needed for drilling activities were returned to original contour to best achieve erosion control and long-term stability. After all grading activities were completed, the disturbed areas no longer in use were re-seeded using a seed mix prescribed by the landowner. The area was seeded as soon as was practicable to provide soil stability and serve as a nurse or cover crop for the desired species. The seed mixture was sterile to prevent the introduction of noxious weeds to the area.

The interim reclamation activities at the NLW 31-8-797 well pad are described above. The on-site activities were performed in conformance with the Pit Closure Work Plan submitted as part of the Form 27 for the site, as well as the COGCC Rules 1000-Series.

## COOLER INFORMATION

- ☐ Custody seal missing or not intact
- ☐ Temperature criteria not met
- ☐ Wet ice received in cooler

## CHAIN OF CUSTODY

- ☐ Chain of Custody not received
- ☐ Sample D/T unclear or missing
- ☐ Analyses unclear or missing
- ☐ COC not properly executed

## SAMPLE INFORMATION

- ☐ Sample containers received broken
- ☐ VOC vials have headspace
- ☐ Sample labels missing or illegible
- ☐ ID on COC does not match label(s)
- ☐ D/T on COC does not match label(s)
- ☐ Sample/Bottles recd but no analysis on COC
- ☐ Sample listed on COC, but not received
- ☐ Bottles missing for requested analysis
- ☐ Insufficient volume for analysis
- ☐ Sample received improperly preserved

## TRIP BLANK INFORMATION

- ☐ Trip Blank on COC but not received
- ☐ Trip Blank received but not on COC
- ☐ Trip Blank not intact
- ☐ Received Water Trip Blank
- ☐ Received Soil TB
