

Proposed Best Management Practices

Encana Oil & Gas (USA) Inc.

MF H17 696

Garfield County, CO

The following are a list of Best Management Practices to be used by Encana on this location:

- Use solar panels as an alternative energy source for on-location production equipment, where appropriate, economically and technically feasible.
- Use multiple gathering lines placed in a single trench to minimize disturbance and construction, where appropriate, economically and technically feasible.
- Install trench plugs (sloped to allow wildlife or livestock to exit the trench should they enter) at known wildlife or livestock trails to allow safe crossing on long spans of open trench, where appropriate, economically and technically feasible.
- Maintain a minimum of five feet of soil cover between the pipeline and the lowest point of the drainage or water body channel.
- Prohibit Encana employees and contractors from carrying projectile weapons. Except during company organized events.
- Prohibit pets on property.
- Strategically apply fugitive dust control measures, including enforcing established speed limits on Encana private roads, to reduce fugitive dust and coating of vegetation and deposition in water sources.
