RE:

Lucero 32-7-11 #1 Onsite
Section 11-T32N-R7W
La Plata County, CO

Dear Mr. Magee:

Thank you for meeting with Samson Resources Company ("Samson") on January 4, 2011, for the onsite inspection of the above referenced well located in Section 11-T32N-R7W (the "Property").

Samson would like to address your memo dated January 6, 2011 regarding general operating requirements and best management practices to minimize impact to wildlife.

1. Seed mix : Samson will utilize Colorado Department of Wildlife's ("CDOW") suggested seed mixes for the interim reclamation of any well location on the Property.
2. Fencing/gating: Samson does not intend to fence the Property but if we do, we will consider the CDOW's friendly fence design pursuant to your guidelines.
3. Consolidate facilities: Samson will place the pipeline (well tie) in the shoulder of the access road located on the Property.
4. Timeline Restrictions: Samson plans to wait until after April 15, 2011 to construct and drill the above referenced well location to avoid displacing deer and elk in their winter habitat.
5. Conservation easement: At this time, Samson does not intend on putting the acreage outside of the above referenced well location into a conservation easement due to the fact that such a conservation easement would restrict Samson's ability to perform additional oil and gas operations on the Property, including construction of facility locations and additional well locations .

6. Wildlife Mitigation Plan: In the past five years, Samson has drilled most of its wells in the San Juan Basin, and currently has approximately 22 wells left to drill. A majority of the 22 remaining wells are located on tribal lands. As there are so few fee wells left to drill, Samson does not believe the development of a wildlife mitigation plan is warranted.

Please let me know if you need additional information.

Sincerely,

SAMSON RESOURCES COMPANY
