Subject: Re: TWOMILE CREEK 22-13H - COGCC review Form 2A (Doc 40013165) for Whiting Oil and Gas Corporation

Rick,

Please make the following changes to the subject APD.

- 1) Gas will be flared until the well is completed. During production, gas will be piped to a facility if necessary.
- 2) Change the Sensitive Area Designation to Yes.
- 3) Yes the reference area is immediately adjacent to and west of the location. Please revise the comment.

Thanks,
Michael L. Brown

Subject: TWOMILE CREEK 22-13H - COGCC review Form 2A (Doc 40013165) for Whiting Oil and Gas Corporation

Hi Michael,

The COGCC is reviewing the Form 2A oil and gas location assessment for the TWOMILE CREEK 22-13H well location in the NWSW Sec22 T11N R57W, Weld County, and requests the following changes to the Form 2A submitted by Whiting Oil and Gas Corporation:

- 1) Facilities:** The facilities list does not include a flare or VOC burner. If gas will be flared or tank vapors will be combusted, please let me know if there will be either be a flare or VOC combustor installed at the location, and I will update the Form 2A.
- 2) Water Resources:** The combination of springs in the area and permeable subsurface material make this a sensitive area due to the potential for an unintended release to impact shallow ground water. Therefore, please approve me changing the Sensitive Area Designation from No to Yes.
- 3) Reference Area:** Please confirm that "The reference area used for a reclamation basis is located on undisturbed ground immediately adjacent to and west of the proposed location as shown in the west facing location photograph."

Please contact me if you have any questions regarding this Form 2A.

Best Regards,

Rick Allison, P.G.
