Hi Liz,

Again, I think the mud disposal method should be land spreading.

Also note that the NRCS soil units you reference are from the Southern Weld county survey. However, the location lies within the North Weld County soil survey, so there is a slight difference in the reports. I have downloaded and attached Unit 63 Tassel loamy fine sand.

Please let me know if you have any questions.

Rick

**Subject:** FRANK TRUST 14-36H - COGCC review Form 2A (Doc 400120913) for Petroleum Development Corporation

Hi Liz,

The COGCC is reviewing the Form 2A oil and gas location assessment for the FRANK TRUST 14-36H well location in the SWSW Sec36 T7N R61W, Weld County, and requests the following changes to the Form 2A submitted by Petroleum Development Corporation:

- 1) Construction:** Per our recent, conversations, please confirm the Mud Disposal method for this location.  
**OFFSITE, LAND FARMING**
- 2) NRCS Soil Units:** My review of the NRCS soil maps indicates that the location is located within two NRCS Units: 5 – Ascalon Sandy Loam 1-3% slopes; and 63 – Tassel loamy fine sand 5-20% slopes. Please approve me changing the NRCS Map Unit name to reflect these two units. Please also send me the NRCS Map Unit Descriptions to attach to the Form 2A. **ATTACHED, NOTE THAT MAP 61 IS THE TASSEL LOAMY FINE SAND 5-20% SLOPES.**

Please contact me if you have any questions regarding this Form 2A.

Best Regards,
