SUNDRY NOTICE

Submit original plus one copy. This form is to be used for general, technical and environmental sundry information. For proposed or completed operations, describe in full on Technical Information Page (Page 2 of this form.) Identify well or other facility by API Number or by OGCC Facility ID. Operator shall send an informational copy of all sundry notices for wells located in High Density Areas to the Local Government Designee (Rule 603b.)

1. OGCC Operator Number: 66571		4. Contact Name	
2. Name of Operator: OXY USA WTP LP		Daniel I. Padilla	
3. Address: 760 Horizon Drive		Phone: (970) 263-3637	
City: Grand Junction State: CO Zip: 81506		Fax: (970) 263-3694	
5. API Number 05-045-17584		OGCC Facility ID Number	
6. Well/Facility Name: Shell		7. Well/Facility Number 697-34-14B	
8. Location (Qtr/Qtr, Sec, Twp, Rng, Meridian):		NWNE, Sec 3, T7S, R97W, 6th PM	
9. County: Garfield		10. Field Name: Grand Valley	
11. Federal, Indian or State Lease Number:

5.

DESCRIBE PROPOSED OR COMPLETED OPERATIONS

OXY USA WTP LP (Oxy) is submitting this sundry to notify the COGCC that Oxy has shut-in the well while new drilling operations occur on the pad. This well had been previously operated on a continuous vent due to collar issues that created bradenhead pressuring within the well. Therefore, Oxy has temporarily shut-in this well to ensure safety of all personnel working on the well pad.

The well has a pressure transducer connected to Oxy's scada system for continuous pressure monitoring. This well is also equipped with a glass faced 3,000 pound manual read gauge to ensure accurate and continuous monitoring of the bradenhead pressure. The blowdown piping will remain in place to ensure that pressures identified within the bradenhead will be safely vented off, as needed.

Once drilling operations have completed, Oxy intends to recompete this well to ensure integrity of the well and repair the bradenhead issue. When the well has been recompleted, Oxy will retest the well to ensure the bradenhead pressure is within reasonable pressures. Outlined below are Oxy's proposed activities to recomplete the well:

- 1) Pull the well;
- 2) Set the composite bridge plug ~200' below the existing cement top and test the casing to 1,500 psig for 15 minutes;
- 3) Perforate ~200' above the existing cement top and set a cement retainer;
- 4) Sting into cement retainer with tubing;
- 5) Establish injection through the tubing and pump cement to the surface, if possible;
- 6) Clean-out the well, run cement integrity log and return the well to production.

Please contact Oxy if you have any questions, comments, or require additional information.
