Alex:

As a follow-up to our conversation this morning, please consider the following:

COA #1 states that "Any berm constructed at the well pad location will be stabilized, inspected at regular intervals (at least every 14 days), and maintained in good condition."

The proposed Piceance Produced Water Transfer facility will be constructed on a previously disturbed area known as the Unocal 5 pad which includes producing wells and production equipment. The proposed facility will be within the footprint of the Unocal 5 pad. Currently, the Unocal 5 pad is being inspected for stormwater compliance on a 30 day schedule.

PDC proposes that the Piceance Produced Water Transfer Facility be inspected for stormwater compliance on a 14 day schedule during the construction phase only. Thereafter, the Unocal 5 pad (which will include the proposed facility) will be inspected every 30 days.

Please let me know if this approach will be acceptable to the COGCC. Call if any questions.
