Scott,

Linda and I just discussed this project and she agrees with the plan you presented. I have forwarded the two pit closure Form 27s for data entry and approval. When the data entry has been completed (probably on Monday) I will forward the remediation #s to you for future reference.

I will add the information from the Form 27 for Remediation #5093 to a Form 27A, which should be visible to you on the contact log portion of the Form 27. The form you submitted will be uploaded to the document file as well.

As you suggested, you may proceed with scheduling field work. Please call Linda if you have any questions.

Thanks,
Nancy Prince, CHMM

Linda,

Attached is a revised update Form 27 to the July, 2010 Form 27 submittal in regards to Remediation # 5093. Also attached are separate Form 27s for the pit closures of both the Upper and Lower BBC pits. The pit closure Form 27s are not related to Remediation #5093. These documents were prepared at the request of the COGCC and the email below. Please let me know if BBC has not met any of these requests.

Thanks,

Scott Ghan

Subject: Upper/Lower Pit Closures and Remediation #5093

Scott,

Based our conversation this afternoon, here are next steps for these projects:

1. I will have the NOAV package submitted by BBC on July 1 uploaded to Remediation #5093.
2. BBC will submit two Form 27s for pit closures. This will include the sampling plan that was outlined in the updated Form 27 submitted in November. I told Scott that we will review this and approve the plan as quickly as possible, and send the new remediation #s. He will continue to work with his consultant to be in the field conducting this sampling as quickly as possible.
 - a. These Form 27s will include a statement to the effect that although they are on the same pad as Remediation #5093, the pit closures are not related to the release being evaluated and remediated under that project.
3. BBC will request that the updated Form 27 submitted in November be withdrawn. A revised update (to the July submittal) referenced to Rem #5093 will indicate that the pits will be closed, not relined. The revision will indicate that the original sampling of down gradient water wells has been done and that a report is being prepared. The revision will also indicate that the originally proposed down gradient pothole(s) evaluation will be conducted, and that additional groundwater investigation will be completed if necessary based on results of pit closure and pothole activities.
4. Water well sampling data will be submitted in a letter report referencing remediation #5093. Scott will check on the status of this report.

Let me know if you have any other questions.

Thanks for your help in getting these projects moving forward.
