CONSTRUCTION LAYOUT

EXHIBIT D – PLAT SHOWING LOCATION OF THE SEDIMENT CONTROL DEVICES AT THE CONSTRUCTION SITE

Sedimentation Basin - 16,560 ft³ with two 18" CMPs; one low CMP with slide gate & one high CMP for overflow. Daylight to natural channel.

Daylight Line Staging Area

24" CMP Culvert @ 10% grade. Install adjustable closure slide gates on CMP at inlet. Riprap discharge outlet area. Flow capacity = 29 cfs each.

Tributary Drainage Area = 10.72 acres
Pit 1 & 2 Surface Area = 1.79 acres
Net Drainage Area = 8.98 Acres

V-shaped borrowditch (typ.) diversion channel 18" deep with 2H:1V side slopes. Flow capacity = 27 cfs.

Edge of Proposed Staging Area

Extend synthetic liner 12" above finished pad grade around perimeter of all pits. (typ.).

Liner and Leak Detection System

The leak detection system will be constructed at the low end (approximately 1 foot lower than the rest of the pit bottom) of the pit. The pit bottom will slope down toward this leak detection sump. The liner in the sump can be shaped into this rounded and sloped configuration and no special welding is required for the detection sump. All seams will be tested to the manufacturer's requirements. The following is a typical drawing of this leak detection system. Its actual shape will vary from this drawing based on field conditions.

Liner & Leak Detention System Details

Pit Liner System:

- * 60 mil HDPE Liner (CL)
- * 200 mil Hypernet Geonet Drain Mat (GSE)
- * 36 mil HDPE Liner (CL)
- * BentoMat DN Geosynthetic Bentonite Liner (CETCO)

Place pipe 2" above bottom of collection drain.
Slope pipe toward deep end of pit.

- 4" Perforated PVC meeting ASTM D 3034 & D 2729.
- 3/4" - 1.5" rounded drain rock.
- Wrap collection drain rock in Mirafi Woven Fabric 160N or equal

Monitoring Stand Pipe with 4" PVC
Removeable Cap to be located at
deep end of pit. Place steel fence
posts for protection.

Install Pocket Vents per manufacturer's
recommendations every 50 liner feet along
perimeter at top of liner. Vent to perforate
both HDPE liners.

- * 60 mil HDPE Liner
- * 200 mil Hypernet Geonet Drain Mat
- * Mirafi NX 160 Fabric Wrap

4 ft. min.
Pad Grade

12" deep minimum anchor
trench per manufacturer's
instructions.

- * Mirafi 160N Fabric Wrap
- * 36 mil HDPE Liner
- * BentoMat DN Geosynthetic Bentonite Liner

- 4" PVC meeting ASTM D 3034 & D 2729.
- 3/4" - 1.5" round drain rock.
(No crushed gravel allowed.)
- 4" Perforated PVC meeting ASTM D 3034 & D 2729.

* Install HPDE / Bentonite Liners;
Hypernet and Vent Pockets
per manufacturer's instructions.

Sensitive Area Pipeline Crossing

Where SG Interests uses a poly pipeline to transport water to or from the McIntyre Flowback Pits over a sensitive area (a stream, wetland or other waterbody), the poly pipe will be contained within a secondary containment system to prevent flowback fluids from contaminating the surface water in the event of a leak in the poly pipeline. The surface poly pipeline will be cased within a steel pipeline of larger diameter for the length of the sensitive area. The ends of the steel casing will extend from upland area to upland area through the entire sensitive area. At the ends of the steel casing, diversion channels will be constructed to direct fluid away from the sensitive area and into containment basins in the event of a leak in the surface poly line. The design of the diversion ditch and the containment basin will be site specific depending on local terrain in the vicinity of that particular crossing. These containment features will be designed by a qualified stormwater inspector with training and experience in sizing and designing these features. A qualified stormwater inspector will monitor and inspect all sensitive areas crossed by such poly pipelines on a daily basis during use and operation. A typical of this secondary containment system for use in sensitive area crossings follows this narrative.

SG Interest, I Ltd.
 Sensitive Area Pipeline Crossing
 Typical Detail Schematic

Cross Section View

Notes:

* Pipelines hydraulic including total dynamic and static head pressures shall be verified to insure that the allowable working pressure of the pipeline is not compromised.

* Storm water and erosion control BMP's shall be installed as necessary by SG Interest, I Ltd. or designated contractor.

* Field verify location of all underground utilities, gas, water, phone, cable and electric lines. Call Before You Dig. Statewide One Call 1-800-922-1987.

*Verify field grades and elevations.

* Not to Scale.
