Interim Reclamation	some surface recontouring will be done, subsoils will be distributed, then topsoils will be distributed and seeded...any remaining soils stockpiles will continue to have wattles in place.
Construction	immediately following construction, wattles will be installed at the toes of the soils stockpiles and at the turn out; and a culvert will be installed in the pad access.
Final Reclamation	when the well no longer produces, the location will be completely reclaimed. The pad will be re-contoured with subsoils redistributed, then topsoils redistributed and seeded. The wattles will be removed. The culvert will be removed when the access is reclaimed
Storm Water/Erosion Control	inspections will be performed at the prescribed intervals, mitigation will be performed as necessary
Drilling/Completion Operations	wattles and culvert will remain during drilling and completion
