Permit	Marathon confirmed that it has 100% of the section.	6/16/2011 6:15:38 AM
OGLA	The location is in a sensitive area because: 1) their proximity to North Pawnee Creek and 2) because of the likelihood of unconfined shallow ground water at the locations. Data from water wells located along North Pawnee Creek and its tributaries (Igo Creek, in particular) indicate that shallow unconfined ground water is likely present and is a usable ground water supply along North Pawnee Creek. Changed Sensitive Area Designation to Yes; added site specific BMP; Ready to Pass 6/13/2011.	5/25/2011 4:11:47 PM

General Housekeeping	Cleanup will consist of patrolling the roadways, access areas, and other work areas to pick up trash, scrap debris, other discarded materials, and any contaminated soil. These materials will be disposed of properly.
Site Specific	A berm will be constructed on the fill side of the pad as shown on the Construction Layout Drawing to prevent a spill or release related to drilling, completion or production operations from leaving the pad and impacting North Pawnee Creek.
Material Handling and Spill Prevention	Spill prevention control and counter measures (SPCC) plans will be in place to address any possible spills associated with Oil and Gas operations throughout the State of Colorado in accordance with 40 CFR 112.
Storm Water/Erosion Control	Stormwater Management Plans (SWMP) will be in place to address construction, drilling and operations associated with Oil and Gas development throughout the state of Colorado in accordance with Colorado Department of Public Health (CDPHE). BMPS will be constructed around the perimeter of the site prior to or at the beginning of construction. BMP's used will vary according to the location and will remain in place until the pad reaches final reclamation.
General Housekeeping	Housekeeping will consist of neat and orderly storage of materials and fluids. Wastes will be temporarily stored in sealed containers and regularly collected and disposed of at offsite, suitable facilities. If spills occur prompt cleanup is required to minimize any commingling of waste materials with stormwater runoff. Routine maintenance will be limited to fueling and maintenance to contain spills or leaks. Any waste product from maintenance will be containerized and transported offsite for disposal or recycling. There will be no major equipment overhauls conducted onsite. Equipment will be transported offsite for major overhauls.
