DESCRIBE PROPOSED OR COMPLETED OPERATIONS

TD: 6060'
SURF CSG: 1128'
PROD CSG: 6038'
NO PERFS

11-22-11: This well builds to 200 psi in one day and blows down to a steady stream of gas in 2 hours through a 2" ball valve without any liquids. The well has been venting to the flare since 10-14-11 (COGCC notified 10-9-11). A temperature log ran after cementing the casing indicates we may have cement up to 200'. Once we are able to obtain CBL results we will be better equipped to make a decision to on how to deal with the bradenhead. Encana requests approval to continuously vent the bradenhead on this well.
