OGLA	The location is in a sensitive area for surface water resources due to its proximity to an intermittent stream located immediately adjacent the southern edge of the disturbed area. The location is in a sensitive area for ground water resources due to the presence of shallow ground water as documented in the sensitive area data attached by the operator. OGLA changed the sensitive area designation from No to Yes. The location is in a riparian area (wetland) and the operator has applied for and received a Section 404 permit. OGLA changed the responses regarding construction in a riparian area and 404 permit from No to Yes. BMP

<u>Type</u>	<u>Comment</u>
Storm Water/Erosion Control	Stormwater management plans (SWMP) are in place to address construction, drilling and operations associated with Oil & Gas development throughout the state of Colorado in accordance with Colorado Department of Public Health and Environment (CDPHE) General Permit No. COR-038637. BMP's will be constructed around the perimeter of the site prior to, or at the beginning of construction. BMP's used will vary according to the location, and will remain in place until the pad reaches final reclamation.
Site Specific	Operator proposes the following measures to prevent a release of drilling, completion, or produced fluids from impacting the stream channel immediately south of the pad: 1. Construct a hard armor/all weather pad as close to zero percent as possible. 2. Construct a ditch and berm along half of the west, and all of the south sides of the pad disturbance area. 3. Place silt fencing just beyond the ditch & berm. 4. Production facilities will be placed in the northeast corner of the location.
General Housekeeping	Housekeeping will consist of neat and orderly storage of materials and fluids. Wastes will be temporarily stored in sealed containers and regularly collected and disposed of at offsite, suitable facilities. If spills occur prompt cleanup is required to minimize any commingling of waste materials with stormwater runoff. Routine maintenance will be limited to fueling and lubrication of equipment. Drip pans will be used during routine fueling and maintenance to contain spills or leaks. Any waste product from maintenance will be containerized and transported offsite for disposal or recycling. There will be no major equipment overhauls conducted onsite. Equipment will be transported offsite for major overhauls. Cleanup of trash and discarded materials will be conducted at the end of each work day. Cleanup will consist of patrolling the roadway, access areas, and other work areas to pickup trash, scrap debris, other discarded materials, and any contaminated soil. These materials will be disposed of properly.
Material Handling and Spill Prevention	Spill Prevention Control and Countermeasures (SPCC) plans are in place to address any possible spill associated with Oil & Gas operations throughout the state of Colorado in accordance with CFR 112.
