33. Comments The answer to question 17 is reference to the nearest building. BLM owns surface and the minerals. Conductor and surface casing cement will be run to surface. 2nd string will be cemented to 200' above surface casing shoe. 3rd string will be cemented into the 2nd string. 3rd string is a tapered string 5 1/2 to 4 1/2. Production casing is designed for an open hold packers type completion. Hydraulic set packers will be spaced 200-300' apart throughout the pay interval that will be activated with pressure from surface. Above the packers in the well will be a casing packer/pack valve system at 3519' in this well. Production cement will be pumped through the pack valve tool to cement 200' ft into the intermediate casing. This cement, along with the casing packer and open hole packers, will create isolation from the production section.
