**Attachments:** Jay Krabacher.vcf; Jay Krabacher2.vcf

Matt:

WPX can delay running the CBL on this well.

Fortunately, the Bradenhead pressure summary is good – as the temp log does not show a clear and pronounced slope change – there are two or three other depths which also could indicate a TOC.

Regards,

Jay Krabacher

**Subject:** Jolley KP 443-21 - Request to defer CBL

Hey Kevin:

WPX Energy Rocky Mountain, LLC requests a CBL deferment on the Jolley KP 443-21 located in the NENE of Section 28, T6S-R91W. Attached is a temperature survey that was performed after cementing the 4 ½" production casing on the subject well. Also attached is a bradenhead pressure summary.

Information pertaining to the request is as follows:

Well:	Jolley KP 443-21
API:	05-045-20707-00
Location:	NENE, Section 28, T6S-R91W
Surface Csg:	9 5/8" set and cemented at 1,396'
Production Csg Cement Date:	4 ½" @ 8,740' – cemented 03/05/2012
Cement:	1595 sks
Cement top from survey:	1,400' (Estimated)
Estimated top of gas:	5,991'
Temp Survey:	Attached
Volume to fill annular:	Hole remained full following cementing operations

Please let me know if you need additional information to approve this deferment. After deferment is received, WPX will continue to monitor the bradenhead pressure until CBL is run and notify if pressure exceeds 150 psig.

Thank you,

Matt
