Hells Gulch Pad 2611  
7/12/11

### Hells Gulch Master Radio Site

Hells Gulch Repeater: 39°19'42.90"N 107°38'9.60"W

The Hells Gulch Pad 26-11 is critical to the communications in the region. The existing pad 26-11 overlooks the entire basin where Oxy currently operates over 20 well pads. Due to the mountainous terrain, Pad 26-11 is the only developed location that will adequately service the entire field.

The communications to the field is repeated through several radio locations to arrive at this critical pad. Moving the communications to another location will require additional engineering, ROW, road development and permitting.

Twin Eagle Consulting is making a recommendation that the Hells Gulch radio repeater not be moved off of the existing Pad 26-11 site. The site can be moved to the entrance of the Pad so that the rest of the pad can be reclaimed. Road access would still be required for maintenance and service of the radio repeater site.

Sincerely,

Kipper L. Greenstreet
