SUNDRY NOTICE

Submit original plus one copy. This form is to be used for general, technical and environmental sundry information. For proposed or completed operations, describe in full on Technical Information Page (Page 2 of this form.) Identify well or other facility by API Number or by OGCC Facility ID. Operator shall send an informational copy of all sundry notices for wells located in High Density Areas to the Local Government Designee (Rule 603b.)

1. OGCC Operator Number: <u>66571</u>	4. Contact Name <u>Daniel I. Padilla</u>	Complete the Attachment Checklist  OP OGCC
2. Name of Operator: <u>OXY USA WTP LP</u>	Phone: <u>(970)263-3637</u>	
3. Address: <u>760 Horizon Drive, Suite 101</u> City: <u>Grand Junction</u> State: <u>CO</u> Zip: <u>81508</u>	Fax: <u>(970)263-3684</u>	
5. API Number <u>05-</u>	OGCC Facility ID Number <u>414404</u>	Survey Plat
6. Well/Facility Name: <u>Oxy Mesa WS Pond / 13W7</u>	Well/Facility Number <u>13 W</u>	Directional Survey
8. Location (Qtr/Qtr, Sec, Twp, Rng, Meridian): <u>SESE, Sec 4, T6S, R97W, 6 PM</u>		Surface Eqmpt Diagram
9. County: <u>Garfield</u>	10. Field Name: <u>Grand Valley</u>	Technical Info Page <input checked="" type="checkbox"/>
11. Federal, Indian or State Lease Number: _____		Other

FOR OGCC USE ONLY

1. OGCC Operator Number: 66571	API Number:
2. Name of Operator: OXY USA WTP LP	OGCC Facility ID #: 414404
3. Well/Facility Name: Oxy Mesa WS Pond / 13W	Well/Facility Number: 13 W
4. Location (QtrQtr, Sec, Twp, Rng, Meridian): SESE, Sec 4, T6S, R97W, 6 PM	

This form is to be completed whenever a Sundry Notice is submitted requiring detailed report of work to be performed or completed. This form shall be transmitted within 30 days of work completed as a "subsequent" report and must accompany Form 4, page 1.

5. **DESCRIBE PROPOSED OR COMPLETED OPERATIONS**

POND 13W

OXY USA WTP LP (Oxy) is requesting to keep the lined storage pond (~~Pond 12~~) open beyond the November 13, 2012 pit permit expiration date for an additional 12 months. This storage pond was approved November 13, 2009, to support multiple wells holding either produced or fresh water for E&P activities support.

Extending the pit expiration date to November 13, 2013 would allow Oxy adequate time to determine if the pit would be needed beyond November 13, 2013. By this time Oxy would either close and remediate the pit with an approved Form 27, or convert this pit to a centralized E&P waste management facility with an approved Form 28.

Since the construction of the pit, Oxy installed an electronic monitoring system (Iconics), which provides continuous fluid level monitoring. The system is also designed to provide an alarm system to notify the production tech prior to the fluid level reaching two feet of freeboard. The alarm and monitoring system allows the production tech to make adjustments to pit fluid inputs and outputs to ensure that the pit does not overrun. The pond is inspected daily by the production tech or designated contractors to maintain pumps, generators, and the remote monitoring system.

Also to comply with COGCC 904.b. (2) & (3), liner specifications, Oxy will implement the following manufacturer recommended and voluntary maintenance protocols.

- Conduct controlled visual inspections semiannually that are documented by the inspector. One shall occur at the start of Spring (end of Winter) and the other shall at the start of Fall. Visual inspections would be conducted by a properly trained production tech or qualified 3rd party inspector (liner installer). The inspection would consist of:
  - o Visually inspecting the exposed liner side walls and liner bottom if the pond does not contain liquids. Note that it is not necessary to drain the pond to conduct the visual inspection. The inspector will look for rips, tears, or other signs of wear on the liner or for signs of stress or separations along the liner seams. The inspector will also look to determine if the liner is thinning or being stretched due to environmental conditions (wind or weathering) or UV light exposure. If the liner has a rip, tear, or a seam has separated, then they will notify Oxy to have the liner repaired.
- In addition to the visual inspection, Oxy will voluntarily conduct a 72-hour hydrotest, at least annually.
  - o Oxy would utilize its existing Iconics fluid monitoring system to conduct the test. In general, the production tech would designate a time when no inputs or withdrawals are planned/allowed for 72-hours, and then use the Iconics system to monitor the fluid level for 72 hours. The production tech will document the results at the end of the 72-hour test. If evidence of a leak is identified, the production tech will determine if additional visual inspections or repairs are required.

Visual inspections and hydrostatic test will be documented and repair or additional maintenance recommendations by the production tech or 3rd party inspector will be provided to the Production Coordinator for review. Based on the findings, the coordinator will request that a work order be issued to implement corrective actions, if any.

The storage pond is fenced, and flagging is in place.
