

Viewing southwest: "Secondary pit" comprising of produced water with condensate. Approx. 25' x 40'.

View of larger pit: (northeast of smaller secondary pit) oil and condensate accumulation at pit surface . Approx. 40' x 60'

Flare pit: (fenced and bermed).

Viewing South near edge of well pad and fill slope: Pathway of erosion channel un-barricaded from low spot in perimeter berm.

Erosion initiating from northwest corner of pad

Gully formation on northwest corner of fill slope initiating from top of pad.
