RE: For your files

Mitch,

I just spoke with Bill Kraft on the phone. After blowing down the well, Bill tagged what appears to be sand fill approximately 200' above the existing CIBP at 5100'. Rather than having to wash down to the CIBP before dump bailing cement on top of the CIBP, I approved a cement dump bail in the casing on top of the existing sand tag. Bill will then proceed with the remaining plugging procedure (the next step would be setting a new CIBP at 4140', above the top Williams Fork perforation at 4192').

Thanks,

David D. Andrews, P.E., P.G.
