

August 13, 2012

Mr. John Axelson, P.G.
Environmental Protection Specialist, Northeast Region
Colorado Oil and Gas Conservation Commission
1120 Lincoln Street, Suite 801
Denver, CO 80203

**RE: NO FURTHER ACTION REQUEST
BAILEY 34-1, 2, 5, 14 & 24-34 TANK BATTERY
NWSW S34 T5N R64W
SPILL TRACKING NUMBER 2229282/REMEDIATION NUMBER 7136**

Dear Mr. Axelson:

Tasman Geosciences (Tasman), on behalf of PDC Energy, Inc. (PDC), has prepared this No Further Action (NFA) Request letter for Bailey 34-1, 2, 5, 14 & 24-34 Tank Battery (Site) located in the NWSW Section 34-T5N-R64W in Weld County, Colorado (Figure 1). Site remediation activities were conducted on July 31 through August 2, 2012 in accordance with the Form 19 submitted on June 28, 2012. Site remediation activities are discussed further in the section below.

Background

It was discovered on June 28, 2012 that the valve to the condensate tank load line was opened in an act of vandalism resulting in a release of oil into the condensate tank secondary containment. A total of 35 barrels (bbl) of oil were released into the confines of the secondary containment, 5 bbl of the total release volume were recovered by vacuum truck and 30 barrels of oil soaked into the soil underlying and adjacent to the containment area.

Site Remediation Activities

Between July 31 and August 2, 350 cubic yards (cy) of impacted soil was excavated from the area of impact directly below and adjacent to the point of release and disposed of at the Waste Management Facility in Ault, Colorado. A photoionization detector (PID) was used to guide the direction, depth, and overall extent of the soil removal effort by monitoring volatile organic compound (VOC) concentrations detected in headspace samples collected from the excavation. Eight soil samples were collected at the extents of the excavation to confirm compliance with soil standards as identified by the Colorado Oil and Gas Conservation Commission (COGCC) in Table 910-1. Soil samples were submitted for laboratory analysis under chain-of-custody procedures for BTEX, TPH – gasoline range organics (GRO), and naphthalene by EPA Method 8260B and TPH- diesel range organics (DRO) by EPA Method 8015 to Summit Scientific Laboratories in Golden, Colorado. Soil sampling results from the excavation are summarized in Table 1 and the soil sample locations are illustrated on Figure 2. Groundwater was not

encountered during excavation activities. The laboratory analytical reports for the soil samples can be found in Attachment A.

Conclusion

Soil analytical data collected subsequent to remediation activities conducted at the Site indicates that petroleum hydrocarbon concentrations are in compliance with COGCC Table 910-1 standards. Based on the supporting data and documentation provided herein, Tasman, on behalf of PDC, is requesting a NFA determination to close the Site.

Should you have any questions regarding this letter and the completed work discussed herein, please contact me by phone at (720) 633-7027 or by e-mail at mlindstrom@tasman-geo.com.

Sincerely,

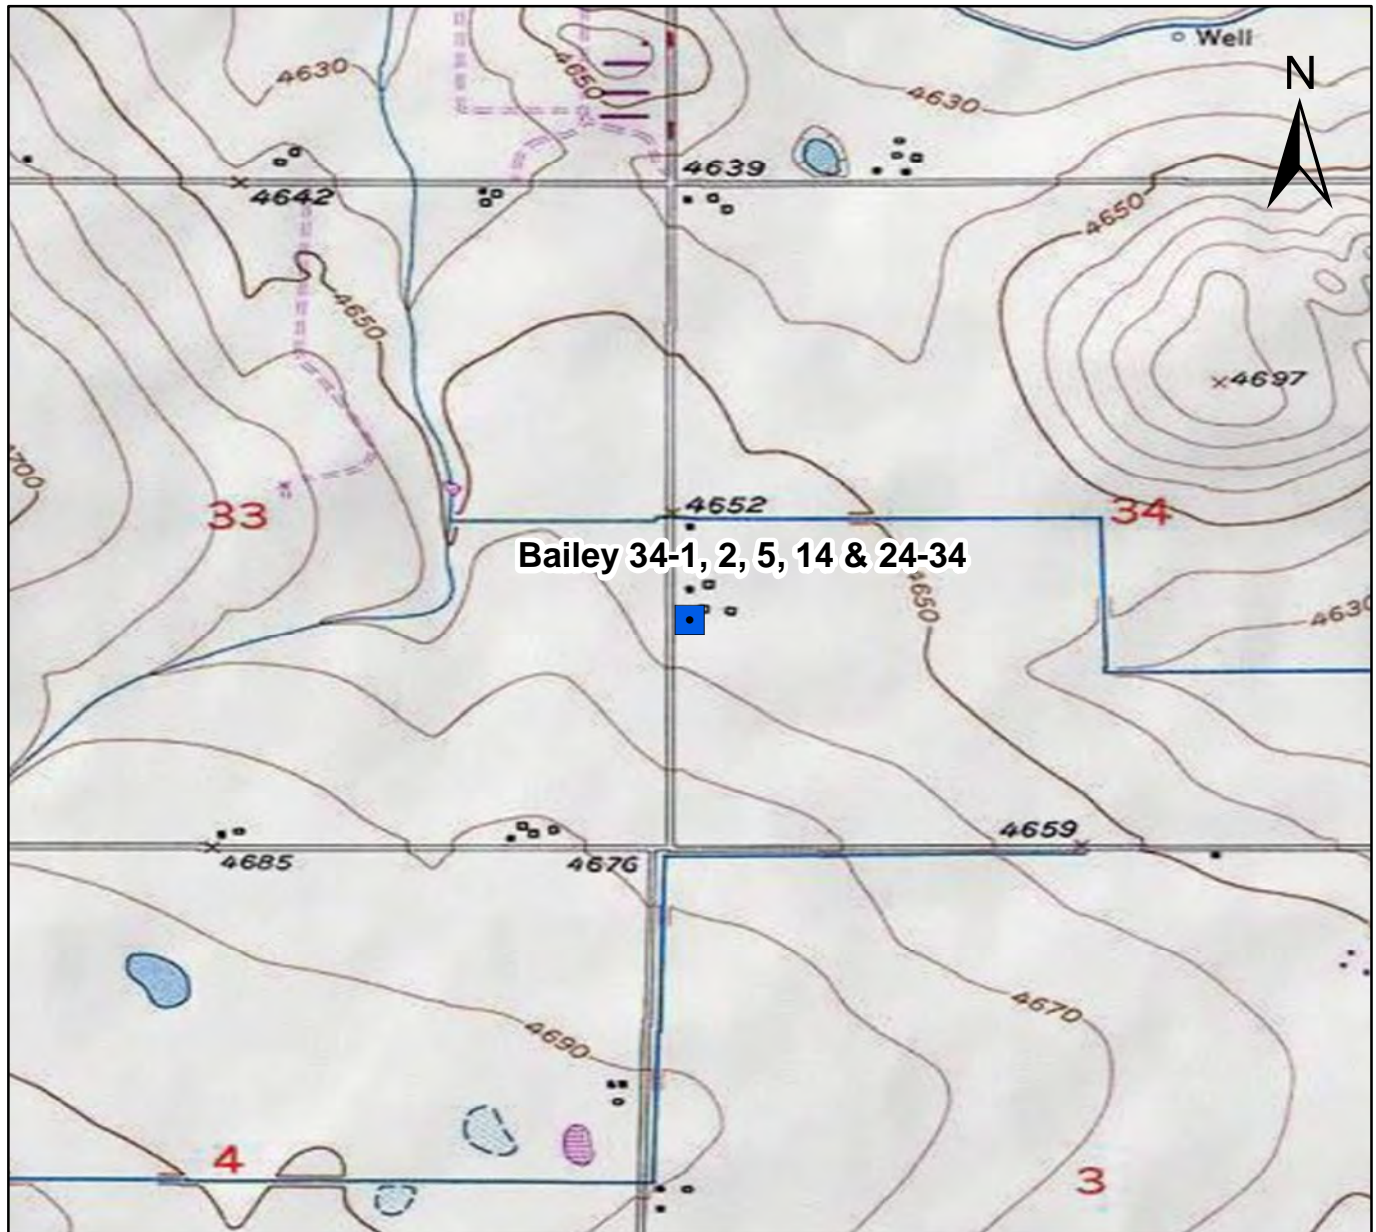

Mike Lindstrom
Project Manager

Constituent concentrations in soil sample SS06 were in exceedance of the COGCC regulations. This material was later excavated and confirmation sample SS08 was collected at the same location.

COGCC standards for Soil				0.17	85	100	175	23	500
(mg/kg) ⁽¹⁾									

Notes:

1). Standards for Soil are taken from 2 CCR 404-1, Table 910-1, effective April 1, 2009.

2). TPH - Total volatile and extractable petroleum hydrocarbons. Value calculated by adding GRO and DRO concentrations.

3). Soil Sample SS06 was later excavated due to constituent concentrations in exceedence of COGCC regulations.

GRO - Gasoline range organics.

DRO - Diesel range organics.

mg/kg= Milligrams per kilogram.

bgs - Below ground surface.

ppm - Parts per million

ND- Not Detected

Bold red values indicate an exceedance of the COGCC soil standards for the Site.
