COGCC Comments

Comment	User	Date
<p>Location passes for final reclamation and well plugging. Dry hole marker noted on-site and location has been re-contoured to conform to existing terrain. Edge of pad is now a portion of an access road for gas activity in area operated by KGH Operating. Area reclaimed to natural and native conditions and good species diversity observed, and consisted of the following: Native Thistle, Big rabbit-brush, Mountain Mahogany, sagebrush, Juniper, tall bunchgrass & and greasewood.</p> <p>A previous inspection (July 20, 2012, doc #668400598) gave the site an “unsatisfactory status” due to the observation of a large population size of what “appeared” to be a “Noxious Thistle”. The site was re-inspected August 29, 2012, when it was determined by COGCCs reclamation specialist that the species-type on location is a native-thistle, and not a noxious-thistle. Samples were collected and submitted for species identification. The Colorado Natural Heritage Program-CNHP, (which tracks and ranks rare and imperiled flora and fauna and habitats) verified that the plant species is Barneby's Thistle (<i>Cirsium barnebyi</i>), a native and endemic plant which has a S-3 protection ranking status—“Uncommon & Vulnerable” and is listed in CNHP's “Watchlist Only” tracking category.</p> <p>Refer to document #668500151 for photos, maps, aerials & correspondence.</p>	baroumas	10/03/2012
