This well is not within the GWA surface location window and does not meet the twinning requirement due to the number of wells planned for this area and at the request of the surface owner. An exception location request letter and signed waivers are attached to the Form 2 and Form 2A./Kerr-McGee Oil & Gas Onshore LP ("KMG") respectfully requests the Director to waive Rule 318A.m for this well. KMG is the operator of the encroached upon well(s).Operator will run open hole logs into the surface casing on the first well drilled on this pad.After fishing for 3 days, we have decided to stop fishing and sidetrack this well. We will end up with a top of fish at approximately 6640'. Following is our sidetrack plan:If we are unable to jar the fish loose by 3AM tonight, we will proceed with sidetracking this well. The current depth to the top of the fish is 6,640', so the plan would be to back off there. Do a clean out run with a bit down to top of fish, TOO. PU 600' of 2 -7/8" tubing and DP, and spot a 500' cement plug from 6,630' (+/-) to 6,130' (+/-). Verbal approved given by Diana Burn on 09/26/12 at 5:02 P.M.

Operator must have a valid water right or permit allowing for industrial use or purchased water from a seller that has a valid water right or permit allowing for industrial use, otherwise an application for a change in type of use is required under Colorado law. Operator must also use the water in the location set forth in the water right decree or well permit, otherwise an application for a change in place of use is required under Colorado law. Section 37-92-103(5), C.R.S. (2011).

Based on the information provided herein, this Application for Permit-to-Drill complies with COGCC Rules and applicable orders and is hereby approved.

Engineer	Unplanned sidetrack required due to hole collapse and faulting. Ran in hole with open ended tubing and set a 500' cement plug (kick off point 6100' +/-) to accomplish sidetrack. Sidetrack approval given by Diana Burn on 9/24/2012.	10/3/2012 8:45:09 AM

Drilling/Completion Operations	Kerr McGee acknowledges and will comply with the COGCC Policy for Bradenhead Monitoring during Hydraulic Fracturing Treatments in the Greater Wattenberg Area dated May 29, 2012.
Drilling/Completion Operations	<p>Prior to drilling operations, Operator may perform an anti-collision review of existing offset wells that have the potential of being within close proximity of the proposed well. This anti-collision review may include MWD or gyro surveys and surface locations of the offset wells with included error of uncertainty per survey instrument, and compared against the proposed wellpath with its respective error of uncertainty. If current surveys do not exist for the offset wells, Operator may have gyro surveys conducted to verify bottomhole location. The proposed well may only be drilled if the anti-collision review results indicate that the risk of collision is sufficiently low as defined by the anti-collision plan, with separation factors greater than 1.5, or if the risk of collision has been mitigated through other means including shutting in wells, plugging wells, increased drilling fluid in the event of lost returns or as is appropriate for the specific situation. In the event of an increased risk of collision, that risk will be mitigated to prevent harm to people, the environment or property. For the proposed well, upon conclusion of drilling operations, an as-constructed directional survey will be submitted to COGCC with the Form 5.</p> <p>At the time of permitting, the operator has identified the following well(s) as being within close proximity of the proposed well: MILLER 40-29</p>
