Jeff,

I am reviewing the Form 2A oil and gas location assessment for the Varra Tank Battery (Doc #400324599). I have the following changes:

1. Water Resources: The location is in a sensitive area due to the presence of shallow ground water, and its proximity to the Eaton Canal. It appears there is a culvert that provides drainage from the field where the tank battery is proposed, under the county road into the Eaton Canal. Do you have any details regarding how the proposed tank battery will be constructed to minimize the risk of a spill on the location from draining through this culvert into the Eaton Canal?
2. LGD Comments: The Town of Windsor has commented on this Form 2A.

Please contact me with any questions regarding this Form 2A.

Regards,

Rick Allison, P.G.

Rick,

Again thanks for the email on the Varra Tank Battery Form 2A.

We agree to a change of the Sensitive Area Designation to Yes due to the shallow ground water and proximity to the Eaton Canal. We will further inspect the proposed battery site and provide details of the BMP's we will employ to minimize the risk of a release reaching the field drainage culvert or the Eaton Canal in the next several days.

If there is anything else we need to do relating to this application please let me know.

Thank you,

Jeff Reale

Rick,

Attached please find an email containing submittals for the move of the Varra tank battery we discussed late last week. I have forwarded location photos, a revised survey plat of the battery location and a revised hydrology map.

Please let me know what else you may need relating to this battery location move.

Thank you,

Jeff

Jeff

I cannot open the email attachment. Can you try again?

Rick

Jessica or Jeff,

I was able to open the attachments. I need the following information to proceed with review of the new tank battery location;

1. Access Road Map
2. New distance to property line and above ground utility
3. Date of GPS measurement and the instrument operator's name

Rick

Rick,

Attached please find the access road map, and a new tank battery plat with the GPS measurement date and operators name. It also should more clearly reflect the distance to the nearest property line which is the section line south @ 121 ft., and the nearest above ground utility @ +/- 2100 ft. west of the stake.

Please let us know if these answers and the new plat are what you needed and if there is anything else you would require.

Thanks,

Jeff
