Your verbal approval is confirmed.

Thanks,
Diana

Diana,

This is sent to confirm the verbal permission you gave us this morning to attempt an open hole sidetrack on the subject well.

The current well bore is 120' high to the Niobrara "B" Bench target at a MD of 6297' and TVD of 5876'. We intend to back up to 6133' MD and cut a window in the curve that will allow us to kick off at 6164' MD and open hole sidetrack the wellbore to hit the "B" Bench at 5995' TVD with an inclination of 90 degrees.

There is 9-5/8" 36# J-55 casing set at 833' and cemented back to the surface.

There is no fish in the hole and no cement plug planned for this side track.

The sidetrack target is the same as the original permitted well plan.

Please let me know if you require any additional information.
