David,

I performed an inspection a couple weeks ago at the Jones-Dupree. COGCC never received a status report for the land treatment of oily waste required by the Conditions of Approval for remediation #6744 that was due no later than 10/31/12. I've attached the COAs again as reference. If Saga wants to continue land treatment of the oily waste, they need to collect samples and send in the status report by the end of the month. Otherwise, load out all of the contaminated soil and properly dispose at a landfill. Send in the disposal documentation with a closure request submitted via Sundry Form 4. If Saga intends to collect the samples, please give me a call to discuss the sampling/analysis requirements.

Also, while I was there, I noticed that somebody had excavated a trash pit. It appeared to be partially full of solid waste. Saga needs to remove all of the trash from the pit and properly dispose in accordance with County ordinance and close the pit.

Please submit the status report with sample results or soil disposal documentation no later than 12/31/12.

Thank you,

John Axelson, P.G.
