Jake,

COGCC is reviewing the above-referenced Form 2A.

Please respond with your approval for me to make the following change to the data submitted.

1. Sensitive Area change from NO to YES - The location falls within the East Cheyenne/Northern High Plains designated groundwater basin. By COGCC 100-Series definition, it is therefore considered a sensitive area. There are also surface water drainages within close proximity to the location.

There do not appear to be any water wells within 1/2 mile of the proposed location, therefore, no groundwater monitoring will be required.

COGCC will attach the following Conditions of Approval (COA) to this Form 2A:

1. Operator must implement site-specific best management practices in accordance with good engineering practices, including, but not limited to, construction of a berm or diversion dike, site grading, or other comparable measures, sufficient to protect the ephemeral streams located approximately 10 feet northeast and 144 feet southwest of the oil and gas location from a release of drilling, completion, produced fluids, and chemical products.
2. Operator shall implement stormwater best management practices to prevent erosion and sedimentation resulting from pad construction activities from adversely affecting the nearby drainages.

Thanks,

--

Greg Deranleau
