Drilling/Completion Operations	Operator will ensure 110 percent secondary containment for any volume of fluids contained at the well site during drilling and completion. Operator will implement best management practices to contain any unintentional release of fluids. Fresh water for the Fresh Water Storage Pit comes from a water provider; water sources permitted for consumable industrial use.
Construction	Operator has designed the well pad with inslopping and a storm water control ditch to prevent storm water run-on/run-off and the release of fluids for the location. See the attached construction layout drawing. The location will be fenced. The Fresh Water Storage Pit is fenced and is located on Section 31 T7N-R59W
