Cause of spill (e.g. equipment failure, human error, etc.): <u>Human Error</u>		
Detailed description of the spill/release incident:		
An operator was gauging tanks during a daily site visit and was draining water from the production tank to the produced water tank. The operator mistakenly left the drain valve open and left the site. An oil hauler discovered the release and the operator returned to the site and closed the drain valve. Approximately 20 bbls of oil were released within the lined tank battery containment berm.		
CORRECTIVE ACTION		
Describe immediate response (how stopped, contained and recovered): <u>The drain line valve was closed. A vacuum truck was used to recover approximately 15 bbls of standing oil and return it to the production tank. The impacted soil and remaining 5 bbls of oil were excavated from above the synthetic liner for disposal.</u>		
Describe any emergency pits constructed: <u>NA</u>		
How was the extent of contamination determined? <u>Approximately 5 cubic yards of impacted soil were removed from above the synthetic liner and transported to Waste Management's Buffalo Ridge Landfill in Keenesburg, Colorado for disposal. The soil below the liner was not impacted by the release, therefore, no confirmation soil samples were collected.</u>		
Further remediation activities proposed (attach separate sheet if needed): <u>No further remediation is required at this site. The soil below the synthetic liner was not impacted by the release. Bonanza Creek is requesting a No Further Action status for this site.</u>		
Describe measures taken to prevent problem from reoccurring: <u>The operator will make sure all valves are closed prior to leaving a site.</u>
