Angie,

I am reviewing Condor Energy's Waves 2H Form 2A location assessment.

Was the water well identified to be 415 field verified? A water well this close to the location should be identified on the Location Drawing and therefore, the Location Drawing needs to be revised.

In addition, the water well is a domestic well and if it exists where mapped, then the location is in a Sensitive Area because it is within 1/8 mile of a domestic water well.

Please contact me with any questions.

Best Regards,

Rick Allison, P.G.

Rick,

Thank you. I will look into it with the surveyors and keep you informed.

Thank you,
Angie

Rick,

I have attached the revised Hydrology Map and Location Drawing for the Waves 2H well. Also, I have left you a message on your voicemail, please feel free to contact me when you have a second. I would like to go through requirements of Rule 901 (e) which I think is applicable.

Thank you,

Angie Galvan

Angie,

Per our conversation, since the water well has been identified as existing, the following condition will be applied to this location assessment:

"Operator shall comply with draft Rule 609 as adopted by the Colorado Oil and Gas Conservation Commission on January 7, 2013."

Please respond with Condor's acknowledgement of this Condition of Approval.

Rick,

Condor confirms that they will test all water wells with ½ mile in accordance with Rule 609.
