- During 3rd quarter 2012 monitoring, bradenhead was found closed and with a surface pressure of 170 psi which would give use a gradient of 0.697psi/ft at the shoe based on fluid level of 14ft. Request to vent bradenhead through an existing line to a tank for 90 days, if possible, or bring in a temporary tank to vent. We would like to determine if pressure will dissipate or if remediation will be needed for this well.
