Construction	<p>Operator has designed the well pad with inslopping and a storm water control ditch to prevent storm water run-on/runoff and the release of fluids for the location. See the attached construction layout drawing.</p> <p>The location will be fenced and the above ground Fresh Water Storage facility will be included in the fenced area. The above ground fresh water storage facility will be located on the pad.</p>
Drilling/Completion Operations	<p>Operator will ensure 110 percent secondary containment for any volume of fluids contained at the well site during drilling and completion. Operator will implement best management practices to contain any unintentional release of fluids.</p> <p>Fresh water for the above ground Fresh Water Storage facility comes from a water provider; water sources permitted for consumable industrial use</p>
