#7610

SITE INVESTIGATION AND REMEDIATION WORKPLAN

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. Form 27 is intended to be used whenever possible. Additional documentation will be required when large volumes of soil and groundwater have been impacted or involve large facilities with multiple source areas. See Rule 910. Attach as many pages as needed to fully describe the proposed work.

OGCC Employee: _____

 Inspection NOAV

Tracking No: 1632343

CAUSE OF CONDITION BEING INVESTIGATED AND REMEDIATED

- Spill or Release Plug & Abandon Central Facility Closure Site/Facility Closure Other (describe): Closure of Emergency Pits

GENERAL INFORMATION

OGCC Operator Number: 69175	Contact Name and Telephone
Name of Operator: Petroleum Development Corporation (PDC)	Name: Adell Heneghan
Address: 1775 Sherman Street, Suite 3000	No: 970-285-9606
City: Denver State: CO Zip: 80203	Fax: 970-285-9619
API/Facility No: 05-045-14738	County: Garfield
Facility Name: Chevron 22D-17	Facility Number: PIT FACILITY # 432080
Well Name: Chevron	Well Number: 22D-17
Location (Qtr, Sec, Twp, Rng, Meridian): SENW, Sec 17, T6S, R96W, 6th P M	Latitude: 39.52442 Longitude: -108.13372

TECHNICAL CONDITIONS

Type of Waste Causing Impact (crude oil, condensate, produced water, etc.): Flow back fluids

Site Conditions: Is location within a sensitive area (according to Rule 901e)? Y N If yes, attach evaluation.

Adjacent land use (cultivated, irrigated, dry land farming, industrial, residential, etc.): Access road, open agriculture land, undeveloped rangeland

Soil type, if not previously identified on Form 2A or Federal Surface Use Plan: Torrionthents-Camborthids-Rock outcrop complex

Potential receptors (water wells within 1/4 mi, surface waters, etc.): Jangle Ditch is located 450' east of the site Parachute Creek is located approximately 880' east of the site Two residences are located approximately 0.42 miles northeast of the site. A hand dug well is believed to be located at each residence

Description of Impact (if previously provided, refer to that form or document):

Impacted Media (check):	Extent of Impact:	How Determined:
<input checked="" type="checkbox"/> Soils	<u>See attached figures</u>	<u>Soil samples for field screening and laboratory analysis</u>
<input type="checkbox"/> Vegetation	_____	_____
<input type="checkbox"/> Groundwater	_____	_____
<input type="checkbox"/> Surface water	_____	_____

REMEDIATION WORKPLAN

Describe initial action taken (if previously provided, refer to that form or document):

On January 22, 2010 a flow back line parted near the wellhead valve, causing an immediate release of flow back fluid onto the pad site. A diversion ditch was excavated across the pad surface from the release location at the well head and connected to two emergency fluid recovery pits. The first pit was excavated approximately 140 feet (ft) east of the center of the production tank onsite. A second pit was excavated 35 ft west of the first pit to capture additional flow back fluid moving across the pad surface. Both of the pits were unlined and approximately 5 ft wide by 5 ft long by 5 ft below ground surface (bgs). The Colorado Oil and Gas Conservation Commission (COGCC) and surface owner were verbally notified of the release on 1/23/10. A Form 19 was submitted to the COGCC on 1/26/10 (Spill #1632343). A Form 15 and this Form 27 are being submitted to document the closure of emergency pits associated with the release.

Describe how source is to be removed:

Pot holes were excavated in each of the two pits on February 17, 2010 to collect confirmation soil samples. Soil samples were collected from the base of each pit at approximately 5 ft bgs and submitted to a contract laboratory for analysis of benzene, toluene, ethylbenzene, xylenes (BTEX), total petroleum hydrocarbons (TPH), electrical conductivity (EC), sodium adsorption ratio (SAR), pH, polycyclic aromatic hydrocarbons (PAHs), and metals. A background soil sample was also collected off the pad surface and submitted for analysis of arsenic. A topographic map of the site area and a site map depicting the soil samples locations are provided as Figures 1 and 2. Soil analytical results are provided in Table 1.

Describe how remediation of existing impacts is to be accomplished, including removal and disposal at an injection well or licensed facility, land treatment on site, removal of impacted groundwater, insitu bioremediation, burning of oily vegetation, etc.:

Vacuum trucks were used to recover flow back fluid from the site. The pits were utilized during fluid recovery activities from 10:45 pm on January 22, 2010 to 3:30 am on January 23, 2010, which was when control of the well was re-gained. The emergency fluid recovery pits and berms allowed for the recovery of approximately 1,182 bbls of flow back fluid. All of the fluid recovered at the site was transported to Cisco, Utah for disposal.

REMEDIATION WORKPLAN (CONT.)

OGCC Employee: _____

If groundwater has been impacted, describe proposed monitoring plan (# of wells or sample points, sampling schedule, analytical methods, etc.):
Groundwater was not encountered at the site.

Describe reclamation plan. Discuss existing and new grade recontouring; method and testing of compaction alleviation; and reseeding program, including location of new seed, seed mix and noxious weed prevention. Attach diagram or drawing. Use additional sheet for description if required.
PDC's production facility remains at the site. The two emergency fluid recovery pits were back filled with clean native soil and restored to previous grade. ✓

Attach samples and analytical results taken to verify remediation of impacts. Show locations of samples on an onsite schematic or drawing.
Is further site investigation required? Y N If yes, describe:
Laboratory results indicated BTEX, TPH, EC, pH, PAHs, and metals, with the exception of arsenic, in soil samples collected from the base of each pit were below COGCC Table 910-1 Concentrations Levels. The arsenic concentrations for both soil samples (FRE1@5' and FRE2@5') exceeded the Table 910-1 Concentration Level at concentrations of 6.1 mg/kg and 6.4 mg/kg, respectively. However, the background arsenic sample exhibited a concentration of 14.8 mg/kg. Therefore, the arsenic concentrations detected at the base of both emergency pits are within naturally occurring background levels. The SAR concentration for soil sample FRE1@5' exceeded the Table 910-1 Concentration Level. Soil sample FRE1@5' was collected from the base of the western most pit which is currently buried beneath 5 ft of backfill cover. Since the COGCC acknowledges they typically regulate SAR to ensure proper reclamation of disturbed areas, a limited exceedance of this parameter will not affect reclamation due to burial below the vegetative root zone. Based on the analytical results provided, PDC is requesting No Further Action status for the emergency fluid recovery pits excavated at the Chevron 22D-17 site. ✓

Final disposition of E&P waste (landtreated and disposed onsite, name of licensed disposal facility, recycling, reuse, etc.):
Vacuum trucks were used to recover flow back fluid from the site. The pits were utilized during fluid recovery activities from 10:45 pm on January 22, 2010 to 3:30 am on January 23, 2010, which was when control of the well was re-gained. The emergency fluid recovery pits and berms allowed for the recovery of approximately 1,182 bbls of flow back fluid. All of the fluid recovered at the site was transported to Cisco, Utah for disposal. ✓

IMPLEMENTATION SCHEDULE

Date Site Investigation Began:	1/22/10	Date Site Investigation Completed:	2/17/10	Remediation Plan Submitted:	2/25/10
