15. Comments:

Nearest building, public road and railroad over 1 mile from proposed production facility. Nearest water well permit no. 287427 (Other/Monitor Well). Nearest surface water is a low area SW of the facility where water may collect. The Landowner gave Noble Energy permission to cross the section line and is the surface owner of both sides of the section line. Landowner requested a new access road be constructed on the west side of the fence instead of using the existing access road on the east side of the fence. The new access road will connect the existing access roads that are located north and south of the facility. The fence located 154' east may be moved during construction. Please note, the actual facility location design could vary. Reference area located immediately adjacent to and east of location on undisturbed land as shown on attached photo.

I hereby certify that the statements made in this form are, to the best of my knowledge, true, correct and complete.

General Housekeeping	General housekeeping will consist of neat and orderly storage of materials and fluids. Wastes will be temporarily stored in sealed containers and regularly collected and disposed of at offsite, suitable facilities. If spills occur, prompt cleanup is required to minimize any commingling of waste materials with stormwater runoff. Routine maintenance will be limited to fueling and lubrication of equipment. Drip pans will be used during routine fueling and maintenance to contain spills or leaks. Any waste product from maintenance will be containerized and transported offsite for disposal or recycling. There will be no major equipment overhauls conducted onsite. Equipment will be transported offsite for major overhauls. Cleanup of trash and discarded materials will be conducted at the end of each work day. Cleanup will consist of patrolling the roadway, access areas, and other work areas to pick up trash, scrap debris, other discarded materials, and any contaminated soil. These materials will be disposed of properly.
Storm Water/Erosion Control	Stormwater management plans (SWMP) are in place to address construction, drilling and operations associated with Oil & Gas development throughout the state of Colorado in accordance with Colorado Department of Public Health and Environment (CDPHE) and General Permit No. COR-038637. BMP's will be constructed around the perimeter of the site prior to, or at the beginning of construction. BMP's used will vary according to the location and will remain in place until the pad reaches final reclamation.
Material Handling and Spill Prevention	Spill Prevention Control and Countermeasures (SPCC) plans are in place to address any possible spill associated with Oil & Gas operations throughout the state of Colorado in accordance with CFR 112.
