**Inspector Comment:**

PARACHUTE VALLEY GATHERING SYSTEM RELEASE PROJECT #2120. 3/20/2013, 8:30 AM David Andrews on location. Last visit by David Andrews was 3/19/2013. Weather: Partly cloudy, calm, 30's. Arrive at Parachute Gas Plant office. Walked to active remediation and investigation area to observe changes since last visit. Main hydrojetted interceptor trenches between valve set and creek relatively dry, but newly installed plastic risers, suction hoses and vacuum trucks standing by and sucking periodically. Contractor was sucking out of short hydrojet trench on northeast side of valve set. New monitoring wells were also observed at various locations along access road, northeast of the interceptor trench. Three vacuum trucks were on location, and were actively removing liquids from trenches with apparent hydrocarbon free product and/or on standby when trenches dried up. Floating absorbent booms were positioned in the creek, downstream from the active hydrocarbon free product recovery operation as a precautionary measure. No visible impact was apparent in the creek. 3/20/2013, 9:00 AM David Andrews off location, and went to Parachute Gas Plant office to meet Doug Parce prior to leaving the property for the day. Mr. Parce (Williams) indicated that liquids being recovered with vacuum trucks are nearly all water now. Williams and WPX were still working on the procedure for planned excavation around gathering line and valve set.
