Dry Creek UT HD 31 - NENE Sec 31, T6N, R88W - Facility ID#232760 - Location ID #316767 - API 05-107-06175

COGCC has received your Form 19 Spill/Release Report and Form 27 Site Investigation and Remediation Plan for the above referenced location. The Spill report has been assigned Tracking Number 200374644 (document #2485390). The Site Investigation & Remediation workplan has been conditionally approved.

As directed by Alex Fischer during February 5, 2013 telephone call, please provide further information and clarification regarding the two separate releases at this facility, including a time line and details regarding the removal of impacted soils. The Form 19 references a spill from a drain hole left open during tank removal operations. As noted in the Field Inspection Form (doc #667100032) from the July 23, 2012 inspection:

- The Form 19 Spill Report was to have been submitted for the alleged release near the **well head** during the MIT;
- The Form 27 Site Investigation and Remediation Workplan was to have been submitted for the release in the **vicinity of the former tank location** where COGCC observed stained soil and advanced a hand auger boring.

Confirmation soil sampling (an appropriate number of discreet soil samples from both areas will need to be collected and analyzed for Table 910-1 constituents, as well as a topographic map and scaled site diagram with sample locations) will need to be conducted for both releases. A copy of the approved Form 27 (document #1949163) is attached; refer to Remediation Project #7539 on future correspondence regarding the release at the former tank location, and to Spill Tracking Number 200374644 regarding the release near the well head. Please call us with questions.
