COGCC has received your Form 27 Site Investigation and Remediation Workplan for the above referenced site. The form has been conditionally approved.

Following the removal of all oily soils and excavation of the skim pit, a *minimum* of five confirmation soil samples -one from the pit bottom and one from each sidewall- shall be collected. All soils shall be analyzed for Total Petroleum Hydrocarbons (Diesel Range Organics and Gasoline Range Organics), Benzene, Toluene, Ethylbenzene, Total Xylenes, Electrical Conductivity, pH, and Sodium Adsorption Ratio to verify compliance with Table 910-1 parameters. The soil sampling results must be submitted for *prior approval before backfilling the pit*. To that end, provide an analytical summary sheet/table comparing soil confirmation sample results to Table 910-1 Standards, accurate GPS coordinates for the pit, a sample location diagram indicating the dimensions of the pit and final excavation dimensions, as well as and the full laboratory analytical report, at minimum.

A copy of the approved form is attached. Please reference Remediation Project #7677 when submitting the required information prior to backfill and closure of the pit.
