Cc: Diane O'Neil <doneil@weberenergylaw.com>, "Alex Fischer P.G. (alex.fischer@state.co.us)"

<alex.fischer@state.co.us>, "Cole Kilstrom (ckilstrom@anteroresources.com)" <ckilstrom@anteroresources.com>

Amber,

**Note: Time sensitive! Would it be possible to process this one (and the next I am sending) before tomorrow Friday at noon?**

Please enter/upload the attached Form 27 and 04, and this email and link to

Location ID #311695

Pit facility ID #295546

API # 045 14328

Please copy Diane, Cole, Alex, and myself with the REM #.

I will close the project immediately.

Thanks,

and sorry for the rush :)

Diane,

Gentry C pad pit project has been approved and will be closed as soon as the REM# is generated. I am changing the pir status from active (AC) to closed (CL). Please save this email as confirmation that this project is been closed and that No Further Action is required for the Gentry C pad pit closure.

Based on review of data presented, it appears that no further action is necessary at this time at this site. However, should future conditions at the site be discovered of contaminant concentrations in soils exceeding COGCC standards or if groundwater is found to be significantly impacted, COGCC may require that further investigation and/or remediation be conducted.

Thanks,

Carlos

Carlos,

Just noticed that the Castle Springs U Pad was not on the list you provided below (Form 4 attached here) — we submitted this earlier this week with the other info on the pits. Antero was able to complete the Castle Springs U Pad a little sooner than we initially expected. Therefore, we are requesting close-out of this matter as well.

Also, we have no record of any previous Form 19s or Form 27s being submitted on the North Bank E pit. Thanks for confirming.

Alex,

Have you had a chance to review the Wasatch Bench "As-Built"? I'm trying to tie up all the final loose ends.

Thanks for everything!

Diane

**Subject:** Re: Antero E-files -Gentry C, North Bank E, Castle Springs U

Diane,

I hope you are doing well and enjoying the (finally) warm temperatures :)

I am working on the projects that Antero wants to close. So far I have the following;

- Grand Brothers (REM #5171). Closed two Form 27s and left one open as requested;
- Closed the 3 REM projects under REM #s 5399 and 5400 with Margaret Ash's approval;
- Entering and closing the remediation work plan Form 27 (see confirmation of NFA above) North Bank E. Please confirm that there was no Form 27 and/or 19 submitted in the past to COGCC (I couldn't find anything in the database), just to make sure we are not leaving anything behind.
- North Bank A (REM # 3805). In process of closing.
- North Bank E: In process of entering data and closing.
- Gentry C: In process of entering data and closing.

Questions:

- Burkle (REM #4923). You said that Alex closed the spill related to this remediation and therefore requested closure of the remediation project (Form 27). Actually, Alex closed the Form 19, Doc # 1630878 on 1/8/2013 corresponding to REM # 4889, on Burkle A pad (See note \*). This is REM #4923 and I don't find any document confirming pit closure (confirmation sampling, reclamation, etc.). Would you please be kind enough and resend me any closure documentation you have available for our review and project closure? I have a Remediation Work Plan but that only presents what WILL BE done. We need a Notice of Completion report that describes pit closure and reclamation.

Note: Just to clarify: Closing a Form 19 does not necessarily means that COGCC is granting a NFA on a particular project. That will be the case if the Form 19 describes a spill and the work done to remediate the impact (usually small spills). When a remediation work plan is required (Form 27), the form 19 is closed with a note that says something like "See REM # xxxx". The REM # xxxx is then used to follow-up on that particular remediation project.

I look forward to your response to proceed with REM #4923 closure.

Thanks,

Carlos

Alex and Carlos,

I hope this email finds you both well!

Please find the attached Form 4s and 27s , briefly summarized below, for your review and comment.

- Castle Springs U Pad: Antero was able to finish the remediation activities prior to the March 31<sup>st</sup> deadline. Therefore, please find the attached Form 4 with confirmation sampling and a request for close-out.
- Gentry C Form 27 and Form 4: We have included a historic Form 27 here describing the steps taken to close the pit at the Gentry C pad. The Form 27 also includes the confirmation sampling taken at the pit indicating compliance with Table 910-1 standards. In addition, we have included a Form 4 for this location formally requesting closure of the pit pending your review of the Form 27 and confirmation sampling.
- North Bank E Form 27 and Form 4: We have included a historic Form 27 here describing the steps taken to close the pit at the North Bank E pad. The Form 27 also includes the confirmation sampling taken at the pit indicating compliance with Table 910-1 standards. In addition, we have included a Form 4 for this location formally requesting closure of the pit pending your review of the Form 27 and confirmation sampling.

The original of these documents were delivered to COGCC today. Please let me know if you have any questions or would like any additional information.

Thanks,

Diane
