

## **Triton Energy Services LLC Waste Management Plan Summary**

Triton Energy Services LLC (TES) plan for the handling and disposal of Exploration & Production (E&P) wastes, including produced water, tank bottoms, drilling mud & cuttings, and other associated E&P wastes is as follows:

- Onsite E&P wastes will be stored in compatible containers or containment devices designed for the storage of such wastes. These containers will be inspected on a regular basis to ensure that no damage or wear will impact their effectiveness.
- The offsite transportation of E&P wastes will be via truck by a licensed transporter. The frequency of these operations will vary by waste volumes.
- Any soils contaminated by E&P waste will be disposed of by a licensed third-party disposal facility (landfill) or at a COGCC approved land farm. Tank bottoms will be disposed of at licensed third-party disposal facilities (landfill). Liquid wastes, including flowback fluid and produced water will be disposed of at licensed third party injection facilities.
- Drilling wastes, which includes drill cuttings and betonitic drilling fluids will be reused by land spreading on COGCC approved mud farms per COGCC Rule 907.d.(3). No other E&P wastes will be disposed of at these sites.
