Rick,

Noble concurs with the change noted below for depth to water for the noted 2A.

Thank you.

Susan,

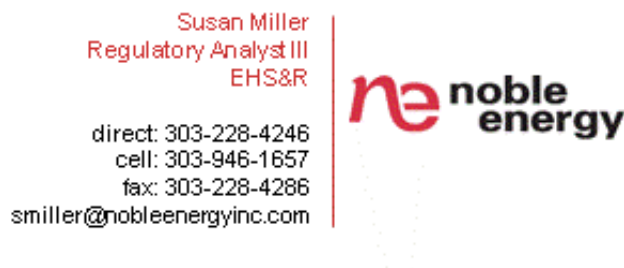

The approved 2As are Noble locations. There is a water well northeast of the approved locations with a static water level of 36 feet. Since the proposed Keota Federal is at the same elevation and close to the other two approved locations, we need to see some consistency in the data reported. Without drilling a piezometer to determine the depth of the water table, we have to assume the depth to water does not drop 100 feet across the section line at the Keota location.

Hi Rick,

Were the approved 2A's for Noble locations?

Thank you.

Susan,

I am reviewing the Form 2A location assessment for the Keota Federal LB34-68HN location. I have changed the depth to water to 36 feet, which is what was reported on the approved Form 2As in Sections 27 and 35.

Please contact me with any questions.

Regards,
