RE: COGCC Inspections outlining need for berms around separators

Per Margaret Ash's announcement of a moratorium on inspection findings requiring berms around separators in order to allow time for the COGCC to better define tanks and flow-through vessels, no corrective action will be taken on such findings for the attached inspection.

RE: No netting over pit

Netting is not required per the approved pit permit; there are no COAs (conditions of approval) on the permit which require netting. This pit is scheduled for closure in the summer of 2013.
