15. Comments:

This location assessment form 2A is for the CMU 22-33 pad from which one well, the CMU 323-33 is being permitted at this time. The location reference point for this pad is the CMU 32-33 well location from which point all measurements are taken. Reference photos for this pad will be provided at a later date. Surface and minerals are owned in fee, however the well is within a Federal Unit. A sensitive area determination concludes that this location is within a sensitive area. Because this location is in a Sensitive Area (See attached SAD), WPX will employ the following BMPs to support protection of surface and ground water:• WPX will ensure 110 percent secondary containment for any volume of fluids contained at well site during drilling and completion operations.• WPX will implement best management practices to contain any unintentional release of fluids.• Either a lined drilling pit or closed loop system will be implemented.

I hereby certify that the statements made in this form are, to the best of my knowledge, true, correct and complete.

BMP

<u>Type</u>	<u>Comment</u>
Drilling/Completion Operations	Utilize staked soil retention blankets for erosion control and reclamation of large surface areas with 1.5:1 or steeper slopes. Avoid use of plastic blanket materials. * Remove well pad and road surface materials that are incompatible with post-production land use and re-vegetation requirements * Use only certified weed-free native seed in seed mixes, except for non-native plants that benefit wildlife * WPX Energy will use certified, weed free grass hay, straw, hay or other mulch materials used for the reseeding and reclamation of disturbed areas. * Install exclusionary devices to prevent bird and other wildlife access to equipment stacks, vents and openings. * Reduce visits to well-sites through remote monitoring (i.e. SCADA) and the use of multi-function contractors. * Avoid dust suppression activities within 300 feet of the ordinary high water mark of any reservoir, lake, wetland, or natural perennial or seasonally flowing stream or river where possible.
Planning	PLANNING BMP's * Use existing roads where possible * Combine utility infrastructure (gas, electric, and water) planning with roadway planning to avoid separate utility corridors * Where possible, consolidate pipeline and existing roadways, or roadways that are planned for development * Place roads to avoid obstructions to migratory routes for wildlife, and to avoid displacement of wildlife from public to private lands. * Maximize use of remote telemetry for well monitoring to minimize traffic * Restrict oil and gas activities as practical during critical seasonal periods * Implement self imposed timing limitations to protect species and/or habitat
