Julie,

Thanks for speaking with me this morning about this Form 2A. I will correct the estimated post construction ground elevation from 4875 feet to 4857 feet in the Construction section so that it matches the ground elevation of 4857 feet in the Location Identification section of the Form 2A. I have a few other comments/changes to the Form 2A below.

1) In the Water Resources section you indicate that a Rule 901.e Sensitive Area Determination was performed. However, the results of the determination were not included with the Form 2A. Please provide me with the Sensitive Area Determination and I will attach it to the Form 2A. If a Sensitive Area Determination was not performed, please let me know and I will correct the Form 2A to reflect that.

2) A review of your Hydrology Map indicates the nearest water well is an agricultural well/windmill approximately 965 feet northeast of the oil and gas location. I would like to change the distance to the nearest water well from 1,562 feet to 965 feet on the Form 2A.

3) Due to the proximity of nearby surface water (barrow ditch 284 feet north shown on your Hydrology Map) and a nearby depth to ground water of 6 feet, I would like to change the Water Resources section of the Form 2A to indicate YES the location is a Sensitive Area.

Please feel free to contact me if you have any questions. Thank you.

-

Hi Doug,

1. We did not perform the sensitive area determination.
2. You may change the distance to the nearest water well to 965'.

3. You can change this to say that is it in a sensitive area.

Please let me know if you have any other questions.

Thanks,

Julie
